***THE WHITE Book***

**BONNEVILLE POWER ADMINISTRATION**  
**December 1998**

## **Cover: Ice Harbor Dam**

Spanning the Snake River just east of Pasco, Washington, Ice Harbor Dam was completed in December 1961. This run-of-river dam is operated by the U.S. Army Corps of Engineers and boasts an instantaneous generating capacity of 603 megawatts.

# Section 1: Introduction

---

## ***Description of the White Book***

The Pacific Northwest Loads and Resources Study (White Book) is published annually by BPA and establishes the planning basis for supplying electricity to customers. It serves a dual purpose.

First, the White Book presents projections of regional and Federal system load and resource capabilities, along with relevant definitions and explanations.

Second, the White Book serves as a benchmark for annual BPA determinations made pursuant to the 1981 regional power sales contracts.<sup>1</sup> Specifically, BPA uses the information in the White Book for determining the notice required when customers request to increase or decrease the amount of power purchased from BPA.

The White Book compiles information obtained from several formalized resource planning reports and data submittals, including those from the Northwest Power Planning Council (Council) and the Pacific Northwest Utilities Conference Committee (PNUCC).

The White Book is not an operational planning guide, nor is it used for inventory planning to determine BPA revenues. Operation of the Federal Columbia River Power System (FCRPS) is based on a set of criteria different from that used for resource planning decisions. Operational planning is dependent upon real-time or near-term knowledge of system conditions, including expectations of river flows and runoff, market opportunities, availability of reservoir storage, energy exchanges, and other factors affecting the dynamics of operating a power system.

The 1998 White Book is presented in two documents: 1) this summary of Federal system and Pacific Northwest region loads and resources; and 2) a technical appendix detailing the loads and resources for each major Pacific Northwest generating utility. This analysis updates the December 1997 Pacific Northwest Loads and Resources Study.

The load forecast is derived by using economic planning models to predict the loads that will be placed on electric utilities in the region. This study incorporates information on contract obligations and contract resources, combined with the resource capabilities obtained from public utility and investor-owned utility (IOU) customers through their annual data submittals to the PNUCC, from BPA's Firm Resource Exhibit (FRE Exhibit 1) submittals, and through analysis of the Federal hydroelectric power system. The 1998 study uses the same economic forecast used for the 1997 study.

In this loads and resources study, resource availability is compared with a medium forecast of electricity consumption. The forecasted future electricity demands—firm loads—are subtracted from the projected capability of existing and “contracted for” resources to determine whether BPA and the region will be surplus or deficit. If Federal system resources are greater than loads in any particular year or month, there is a surplus of energy and/or capacity, which BPA may use or market to increase revenues. Conversely, if Federal system firm loads exceed available resources, there is a deficit of energy and/or capacity and BPA would add conservation or contract purchases as needed to meet its firm loads.

---

<sup>1</sup> BPA's 1981 power sales contracts expire between June 30 and September 30, 2001.

This document analyzes the Pacific Northwest's projected loads and available generating resources in two parts: 1) the loads and resources of the Federal system, for which BPA is the marketing agency; and 2) the larger Pacific Northwest regional power system, which includes loads and resources in addition to the Federal system.

The loads and resources analysis in this study simulates the operation of the power system under the Pacific Northwest Coordination Agreement (PNCA) produced by the Pacific Northwest Coordinating Group.

This study presents the Federal system and regional analyses for the medium load forecast. This analysis projects the yearly average energy consumption and resource availability for Operating Years (OY)<sup>1</sup> 1999-2000 through 2008-09. The study shows the Federal system's and the region's monthly estimated maximum electricity demand, monthly energy demand, and monthly maximum generating capability—capacity—for OY 1999-2000, 2003-04, and 2008-09. The Federal system and regional monthly capacity surplus/deficit projections are summarized for 10 operating years.

The hydroregulation study used in this analysis simulates operation of the system under the 1995 National Marine Fisheries Services (NMFS) Biological Opinion for Salmon (1995 BO) dated March 2, 1995, and the 1998 Supplemental NMFS Biological Opinion covering steelhead (1998 BO) dated May 14, 1998. These NMFS opinions provide:

Snake River flow augmentation April 3 through August 31;

Storage of water January through mid-April for lower-Columbia River flow augmentation April 20 through August 31; and

Mid-Columbia flow augmentation April 10 through June 30.

This analysis includes the monthly Federal system and regional firm energy surpluses and deficits for OYs 2000 through 2009 for each of the 50 historical water years on record. These are found in section 7, exhibits 9 through 18, pages 68 through 77, for the Federal system, and in section 8, exhibits 27 through 36, pages 106 through 115, for the region.

The Federal system analysis is presented in section 4, beginning on page 12. The analysis for the Pacific Northwest region is presented in section 6, page 33.

The Administrator's Record of Decision (ROD) for the 1998 White Book is contained in section 9, page 117.

The glossary of terms and a list of acronyms are included in section 10, page 123.

Beginning with this year's analysis, the Pacific Northwest Loads and Resources Study Technical Appendix will be made available as an electronic rather than a printed document. The 1998 Pacific Northwest Loads and Resources Study Technical Appendix and this 1998 Pacific Northwest Loads and Resources Study summary document are available on BPA's external web site at <http://www.bpa.gov/power/whitebook98>.

Additional copies of this summary are also available from BPA's Public Involvement Office, toll-free, 1-800-622-4520.

---

<sup>1</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

## **Section 2: Background**

---

### **Pacific Northwest Planning Area**

The Pacific Northwest regional planning area is defined by the Pacific Northwest Electric Power Planning and Conservation Act (Northwest Power Act), enacted in December 1980. It includes Oregon, Washington, Idaho, Montana west of the Continental Divide, and portions of Nevada, Utah, and Wyoming that lie within the Columbia River drainage basin. In addition, any rural electric cooperative customers not in the geographic area described above that were served by BPA on the effective date of the Northwest Power Act are included in BPA planning for resources to meet its load.

### **Hydro System Operations Under the 1995 and 1998 NMFS Biological Opinions**

The NMFS 1995 and 1998 BOs further changed the focus of hydro system operation for fish passage to monthly flow-based targets from storage-based targets. These changes emphasized monthly flows at hydro projects, thereby limiting the ability of the hydro system to shift and shape flows in any one month to meet firm system energy needs.

To demonstrate the variability of the hydro system under the NMFS 1995 and 1998 BOs, this document presents the Federal system and regional firm surpluses and deficits for OYs 2000 through 2009 for each of the 50 historical water conditions on record (1929 through 1978). The results are shown in exhibits 9 through 18, pages 67 through 77, for the Federal system, and in exhibits 27 through 36, pages 105 through 115, for the region. The information presented in these tables shows the monthly variability of the surpluses and deficits over the 50 water conditions.

Traditional annual energy loads and resources studies have been produced using a specific set of assumptions and serve as the base case for calculating the load-resource balance in sections 4 and 6.

### **Load Forecasting**

This analysis uses the same load forecast as did the 1997 White Book. This forecast is based on BPA's 1996 Final Rate Filing for all but the direct service industries (DSIs). The DSI load forecast reflects BPA's actual industrial contracts and was updated for the 1998 analysis. Loads for each of the customer groups were estimated separately: non-generating public agencies, DSIs, IOUs, Federal agencies, and the U.S. Bureau of Reclamation (USBR). In general, BPA's load forecasts are designed to respond to and reflect factors such as employment, electricity prices, aluminum prices, smelter production costs, and planned conservation actions.

### **Pacific Northwest Hydro and Thermal Resources**

#### **Hydro Resources**

**Energy Capability.** This study uses 1937 water conditions (the 12-month period from August 1936 through July 1937) to estimate the firm hydro capability in a historical sequence of low water conditions. The critical period represents the period of adverse water conditions

during which the hydro system produced the maximum amount of firm energy by drafting the reservoirs from maximum required content to minimum required content.

**Capacity.** The monthly instantaneous capacity of hydro projects is defined as the full-gate-flow maximum available generation at each project, based on the average monthly elevation resulting from 1936-37 water reservoir levels. BPA assumes 1936-37 water levels to estimate the regional hydro capacity because that year approximates a peaking capability that is consistent with the reliability criteria set forth in the Pacific Northwest Coordination Agreement.

The monthly instantaneous capacity is limited to 10 times the project's average monthly energy production because, at low or minimum water discharge, a plant may not be allowed to release enough water to achieve maximum capacity. The region's hydro projects have constraints and storage limitations within any water condition.

BPA's planning projections reduce the estimated instantaneous hydro capacity to reflect a Federal sustained peaking level of 50 hours per week. This level provides estimated firm hydro capacity that can be maintained each day and continued for weeks at a time. This definition of firm capacity provides a better measure of resource peak capability. The hydro generation also is adjusted to allow for scheduled hydro maintenance, spinning reserves, and forced outages.

**Multiple-Use Planning.** Pacific Northwest hydro projects have many uses besides power generation. The projects may provide flood control, supply irrigation for farming, assist in river navigation and recreation, and contribute to municipal water supplies. In addition, constraints also are in place to protect and enhance resident and anadromous fish populations. These nonpower uses place operating requirements on the reservoirs and may reduce or increase hydroelectric power production. BPA's resource planning takes into account all presently known nonpower operating requirements in assessing regional hydro system capability.

The Council, BPA, and other Pacific Northwest entities will continue to evaluate ways to enhance fisheries and wildlife. Future proposals could include additional amendments to the Council's Columbia River Basin Fish and Wildlife Program, revision of the Pacific Northwest Coordination Agreement, renegotiation of Canadian Entitlement allocation agreements, and/or implementation of additional programs in support of the Endangered Species Act. The impacts of future proposals are unknown. These proposals, however, most likely will increase nonpower requirements on the hydro system and change operating flexibility, change the monthly shape of streamflows, and change the availability of sustained Federal capacity. Future studies will incorporate any known impacts.

### **Thermal Resources**

The expected output of regional thermal resources is based on the energy and capacity capabilities submitted to BPA by the project owners. The output of all thermal plants is reduced to allow for scheduled maintenance, spinning reserves, and forced outage reserves.

### ***Analysis of Federal System Firm Loads and Resources***

BPA is a power and transmission marketing agency, responsible for acquiring and delivering sufficient power to serve the firm electric load needs of its customers. BPA does not own generating resources. BPA's customer loads and contractual obligations, combined with the Federal and non-Federal resources from which BPA acquires the power it sells, are collectively called the Federal system. BPA owns and operates the primary transmission grid—more than 14,700 circuit miles of power lines—in the Pacific Northwest.

The Federal system loads are made up of BPA's sales to other Federal agencies, its regional public agencies, and other firm contractual obligations to deliver power.

The hydro resources of the Federal system include 30 dams owned and operated by the USBR and the Corps, plus hydroelectric projects owned by the City of Idaho Falls, Energy Northwest (ENW) (formerly Washington Public Power Supply System), and Lewis County Public Utility District (PUD). BPA has the exclusive right to sell power generated by USBR and Corps hydroelectric projects. BPA also markets the thermal generation from the WNP-2 nuclear plant, operated by ENW.

The Federal system analysis is shown in section 4, beginning on page 12.

### ***Analysis of Regional Firm Loads and Resources***

The Pacific Northwest regional analysis contains the Federal system loads and resources, plus non-Federal regional loads, contractual obligations, and generating resources. The region has three load groups: Federal system, generating public agencies, and IOUs. The regional hydro resources are owned and operated by various Federal entities, public agencies, and IOUs. The regional thermal generating resources, fueled by biomass, coal, natural gas, oil, or nuclear power, are owned and operated by various regional entities.

The regional analysis is presented in section 6, beginning on page 33.

### ***Canadian Treaty Downstream Benefits***

Obligations under the Columbia River Treaty will change during the study period. This treaty between the United States and Canada enhanced the use of storage in the Columbia River Basin. The treaty and treaty projects provide downstream benefits by increasing the firm power generating capability of U.S. hydro projects. Under the terms of the agreement, the downstream power benefits are shared equally between the two countries as determined by a joint Annual Operating Plan.

### ***Canadian Entitlement to Columbia Storage Power Exchange (CSPE) Through March 31, 2003***

Canada agreed to sell its share of the downstream power benefits, called the Canadian Entitlement, for 30-year periods beginning with the completion of each of the three Canadian Treaty Projects (Mica, Duncan, and Arrow). The Canadian Entitlement was sold to the Columbia Storage Power Exchange (CSPE), a Pacific Northwest corporation that was formed to sell the Canadian benefits to participating Pacific Northwest utilities. The Canadian Entitlement sale to CSPE began to expire April 1, 1998, 30 years after the completion of the first Treaty Project, and fully expires March 31, 2003.

### ***Canadian Entitlement to Canada, Beginning April 1, 1998***

A portion of the Canadian share of downstream power benefits began to return to Canada April 1, 1998, 30 years after the first Treaty Project was completed. All remaining Canadian downstream power benefits will revert to Canada by April 1, 2003, 30 years after the third Treaty Project was completed. This analysis assumes Canadian Entitlement deliveries to Canada under the long-standing Canadian Entitlement between British Columbia and the United States. The delivery of Canadian Entitlement to Canada that started April 1, 1998, is included in each participating utility's loads and resources balance. BPA delivers the total Canadian Entitlement, shown in table 1, page 6, and it is included as a Federal export.

**Table 1**

**Canadian Entitlement to Canada  
Energy and Capacity Obligations Beginning April 1, 1998**

| OPERATING YEAR           | ENERGY IN AVERAGE MEGAWATTS |      |      |      |      |      |      |      |      |      |

## ***Major Sources of Uncertainty***

### **Loads and Resources Uncertainty**

Future Federal system and regional firm surpluses/deficits are subject to a number of uncertainties over the 10-year study period. These uncertainties include:

- Changes and uncertainties regarding deregulation of retail sales in the electrical power industry;
- BPA's future marketing efforts, including conservation;
- Possible increases or decreases in BPA's public agency, IOU, and DSI load obligations that could result from BPA's subscription process and execution of new contracts replacing BPA's current power sales contracts expiring between June 30 and September 30, 2001;
- Deviation from the forecasted rate of load growth;
- Failure of existing or contracted generating resources to operate at anticipated times and levels; and
- Additional changes in existing hydro system operation in response to programs developed to address the Endangered Species Act or other environmental considerations.

These uncertainties could affect both the size of projected surpluses or deficits and the times at which they occur.

### **Contractual Uncertainty**

Given the changes in the wholesale electric utility industry that have taken place over the last several years and the reductions in public agency and DSI firm requirements, the extent of Federal obligations to these customers after the current contracts expire in 2001 is somewhat uncertain. The extent of BPA's firm obligations after these contracts expire may affect the Federal system and regional loads and resources balances during the 10-year period examined in this study.

This study assumes that the following contracts, though they are subject to change as noted, will extend throughout the 10-year study period:

- BPA's power sales contracts with its public agency and IOU customers, which expire between June 30 and September 30, 2001, and its contracts with its DSI customers, which expire on September 30, 2001, will be replaced in the subscription process and may result in different Federal obligations to these customers.
- The Pacific Northwest Coordination Agreement will expire June 30, 2003. BPA expects that this agreement, which coordinates operation of the Pacific Northwest power system and that of Canada, will be replaced with a new agreement. The provisions of a new agreement may be different from the existing agreement.

# **Section 3: Changes in the 1998 Pacific Northwest Loads and Resources Study**

---

This section describes the major changes in the assumptions of the 1998 Pacific Northwest Loads and Resources Study compared to the 1997 study. Other changes are reflected in the data for each utility contained in the 1998 Pacific Northwest Loads and Resources Study Technical Appendix. The 1998 Technical Appendix is available available on BPA's external web site at <http://www.bpa.gov/power/whitebook98>.

## ***Firm Load Changes***

The 1998 White Book analysis uses load projections that incorporate the following changes since last year's analysis:

- 1998 BPA Load Forecast: This analysis uses the same medium load forecast of Federal agencies, public agencies, and IOUs that was used in BPA's 1996 Rate Filing. This is the same forecast that was used in the 1997 study.
- DSI Power Sales Contracts: This study includes BPA's DSI power sales contracts and DSI block sales agreements signed through December 31, 1996. The DSI contracts were updated from the 1997 study and expire September 30, 2001, but are assumed to remain at the OY 2001 level through the remainder of the study period.

## ***Firm Resource Changes***

The 1998 White Book analysis reflects the following resource changes compared to last year's study:

- The NMFS 1995 and 1998 Biological Opinions: The hydroregulation study used in this analysis incorporates the streamflow requirements of these opinions.

Figure 1, page 9, shows the monthly variation of the Federal system hydro energy capability for OY 1999-2000 under the NMFS 1995 and 1998 BOs, assuming 1937 water conditions.

## ***Firm Contract Changes***

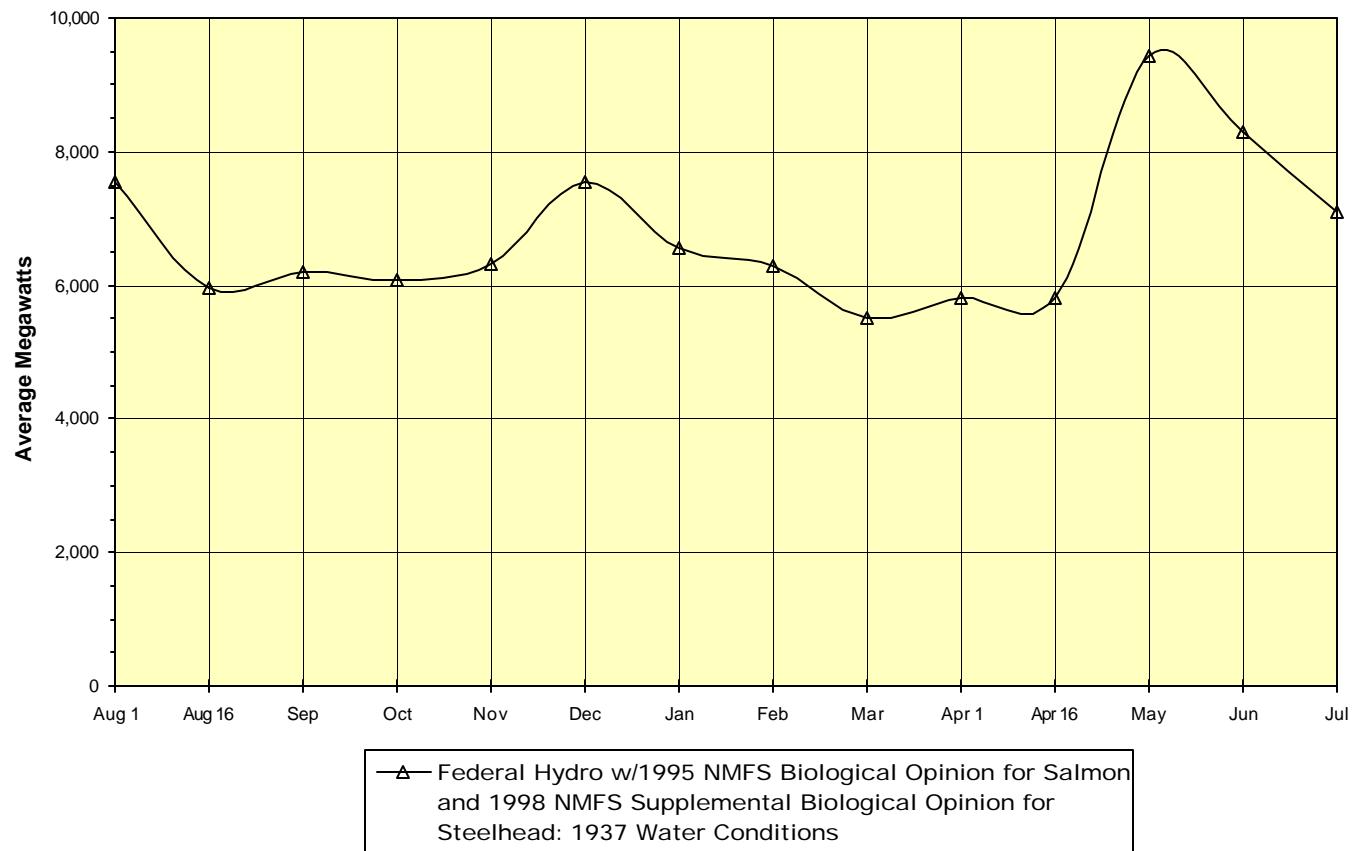

To provide for diurnal shaping of capacity and capacity-for-energy exchange contracts, BPA now shows on-peak energy deliveries with these types of contracts. In addition, the assumption of off-peak return of replacement energy is included. In past analyses, these energy deliveries were assumed to cancel out and were not shown.

The 1998 White Book analysis uses the following contract changes versus last year's study:

**Exports:** The 1998 White Book analysis includes the following new or changed Federal export transactions: BPA to Aneheim, capacity/energy exchange and capacity sale; BPA to Azusa, power exchange and capacity sale, with power sale and energy sale ended; BPA to Banning, power exchange and capacity sale, with energy sale and power sale ended; BPA to BART, power sale; BPA to Colton, power exchange and capacity sale, with energy sale and power sale ended; BPA to Farmington, power sale; BPA to Federal agencies, power sale; BPA to New Energy Ventures, power sale ended; BPA to New Energy Ventures-SP, power sale ended; BPA to other entities, power sale; BPA to Palo Alto, capacity sale and seasonal

energy exchange; BPA to Pasadena, capacity/energy exchange and seasonal exchange, with power sale ended; BPA to Riverside, capacity/energy exchange, capacity sale, and

**Figure 1**  
**Federal Firm Hydro Energy: Monthly Variability for OY 1999-2000**

capacity/diversity exchange; BPA to SCE, power sale, capacity/energy exchange, and option capacity; and BPA to SCE Source, power sale.

BPA's power sale and capacity/energy agreements with the cities of Burbank, Glendale, and Pasadena, and to SCE, are shown in power sales mode through the study horizon. BPA to SCE option capacity is shown through OY 2004. BPA renegotiated its contract with the M-S-R Public Agency (M-S-R), whose members include the Modesto Irrigation District and the cities of Santa Clara and Redding, California, to continue as a power sale through April 15, 2013.

**Contracts Out:** This analysis has the following new or changed BPA intraregional contracts out: BPA to AVC (formerly WWP), supplemental and entitlement capacity, WNP-3 settlement, and deferred power exchange; BPA to Bandon, power sale; BPA to Benton County PUD, power sale ended; BPA to Big Bend Electric Cooperative, summer seasonal product; BPA to Chelan, supplemental and entitlement capacity; BPA to Clatskanie, power sale; BPA to Colockum, supplemental and entitlement capacity; BPA to Columbia River PUD, power

sale; BPA to Cowlitz County PUD presubscription power sale, power sale, and supplemental and entitlement capacity; BPA to Douglas County PUD, power sale and supplemental and entitlement capacity; BPA to EWEB, presubscription power sale and supplemental and entitlement capacity; BPA to City of Forest Grove, power sale and supplemental and entitlement capacity; BPA to Grant County PUD, power sale and supplemental and entitlement capacity; BPA to Kittitas County PUD, supplemental and entitlement capacity; BPA to Lewis County PUD, power sale; BPA to Lower Valley Electric Cooperative, power sale; BPA to Mason County PUD, power sale; BPA to the City of McMinnville, power sale and supplemental and entitlement capacity; BPA to the City of Monmouth, power sale; BPA to MPC, power sale; BPA to Nespelem Valley Electric Cooperative, summer seasonal product; BPA to Northern Wasco PUD, power sale; BPA to Okanogan, supplemental and entitlement capacity; BPA to other entities, various agreements; BPA to small, nongenerating public utilities, presubscription power sales, with Hungry Horse power sales ending; BPA to PGE, supplemental and entitlement capacity; BPA to PP&L, supplemental and entitlement capacity, capacity sale, power sale for Southern Oregon, and Centralia standby; BPA to PGE, power sale and capacity sale; BPA to PSE, supplemental and entitlement capacity, WNP-3 settlement changed, and power exchange ended; BPA to Raft River Electric Cooperative ended; BPA to Richland, Ormet power sale; BPA to Salem, power sale; BPA to SCL, supplemental and entitlement capacity; BPA to Snohomish County PUD, power sale; BPA to Springfield Utility Board, presubscription power sale and power sale; BPA to Tillamook County PUD, power sale; BPA to TPU, supplemental and entitlement capacity; and BPA to United Electric Cooperative, power sale.

**Imports:** This analysis includes the following new or changed interregional contracts: Anaheim to BPA, peak replacement; Azusa to BPA, power exchange and peak replacement; Banning to BPA power exchange and peak replacement; Colton to BPA, power exchange and peak replacement; other entities to BPA, various agreements; Pasadena to BPA, peak replacement; Riverside to BPA, peak replacement; SCE to BPA, peak replacement; PowerEx to BPA for ABC, peak replacement; and PowerEx to BPA for Palo Alto, peak replacement.

**Contracts In:** This analysis includes the following changes in BPA intraregional contracts in: AVC to BPA, supplemental peak replacement, and WNP-3 settlement; Chelan County PUD to BPA, supplemental peak replacement; Colockum County PUD to BPA, supplemental peak replacement; Cowlitz County PUD to BPA, supplemental peak replacement; Douglas County PUD to BPA, supplemental peak replacement; EWEB to BPA, supplemental peak replacement; City of Forest Grove to BPA, supplemental peak replacement; Grant County PUD to BPA, supplemental peak replacement; Kittitas County PUD to BPA, supplemental peak replacement; City of McMinnville to BPA, supplemental peak replacement; MPC to BPA, peak replacement; Okanogan County PUD to BPA, supplemental peak replacement; other utilities to BPA, power sales and supplemental peak replacement; PGE to BPA, supplemental peak replacement, peak replacement, and WNP-3 settlement terminated; PP&L to BPA, peak replacement and supplemental peak replacement; and PSE to BPA, supplemental peak replacement and WNP-3 settlement, with surplus power exchange ended; SCL to BPA, supplemental peak replacement; and TPU to BPA, supplemental peak replacement.

### ***Public Agency Power Sales Contract Diversification***

To maintain BPA revenues and improve its public utility customers' satisfaction with their BPA business relationship, the agency offered these customers a series of amendments to their 1981 power sales contracts. In 1996, BPA offered three forms of amendatory agreements to their customers' 1981 power sales contracts. BPA also negotiated new requirements

power sales contracts with different terms and conditions with those customers who wished to have a larger portion of their firm power load served by firm non-Federal resources than was available under the amended agreements. Finally, some customers elected to continue with their 1981 contracts unamended. All of the agreements—the amendatory agreements, the new contracts, and the unamended 1981 utility power sales contracts—will have expired by September 30, 2001. In exchange for this rate certainty and market access, these customers are required to provide revenue certainty to BPA by making load commitments through September 30, 2001.

Table 2, below, shows the load diversification for the public agencies from BPA's Load Commitment Exercise. It is shown as a resource called Public Agency Diversification in each utility's load-resource balance, which reduces each utility's power sales contract purchase from BPA through September 30, 2001. Public contract diversification has changed since last year's analysis due to diversity reductions by Pacific Northwest Generating Company (PNGC),<sup>1</sup> Benton County PUD, Franklin County PUD, the City of Richland, and Gray's Harbor PUD. These adjustments reduce public diversity by about 210 average megawatts in OY 2002.

**Table 2**

**Public Agency Power Sales Contract<sup>2</sup> Diversification**  
AVERAGE MEGAWATTS

| OPERATING YEAR <sup>3</sup>                | 2000  | 2001  | 2002 and beyond |
|--|-------|-------|-----------------|
| <b>Chelan County PUD</b>                   | 0     | 0     | 0               |
| <b>Clark Public Utility</b>                | 257   | 270   | 270             |

| <b>Non-Generating Public Agencies</b>      | 380   | 334   | 182             |
| <b>TOTAL PUBLIC AGENCY DIVERSIFICATION</b> | 1,168 | 1,136 | 987             |

<sup>1</sup> Pacific Northwest Generating Company (PNGC) is a consortium of small generating utilities whose members include Blachly Lane, Consumers Power, Coos-Curry, Douglas Electric, Lane Electric, Central Electric, Lost River, Northern Lights, Oregon Trail, Raft River and Umatilla.

<sup>2</sup> Public agency power sales contracts and amendments to them that allow for load diversification expire September 30, 2001. For OY 2002 and beyond, public agencies may place power sales obligations on BPA through the subscription process.

<sup>3</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

## **Section 4: Federal System Analysis**

---

This study provides base case assumptions from which scenarios encompassing a wide range of uncertainties about BPA's future may be evaluated. It incorporates only load forecast uncertainty and capacity availability under extreme weather conditions.

The Federal system loads and resources analysis is based on the following assumptions:

- Capacity surplus/deficit values do not reflect potential nighttime return problems on the Federal system;
- The region experiences medium load growth;
- The Pacific Northwest Coordination Agreement, which expires June 30, 2003, is replaced with a like agreement;
- BPA's power sales contract obligations with Pacific Northwest Federal and public agencies and IOUs, which expire between June 30 and September 30, 2001, are assumed to continue at their FY 2001<sup>1</sup> levels through the remainder of the study period;
- BPA's power sales contract obligations with its DSI customers, which expire September 30, 2001, are assumed to continue at their OY 2001 levels through the remainder of the study period;
- All existing Federal contractual arrangements not included under Pacific Northwest power sales contracts which expire by the terms of their agreements are not renewed;
- Federal surplus firm power sales and capacity/energy exchange agreements with the cities of Burbank, Glendale, and Pasadena, and with SCE, are shown in power sale mode throughout the study period;
- BPA purchases option energy from SCE through OY 2004;
- SCE purchases option capacity from BPA through OY 2004;
- BPA's surplus firm power sale to Puget Sound Power and Light terminates and converts to a seasonal power exchange beginning in OY 2001-02, per the terms of the contract;
- Sustained capacity limits are 50 hours per week;
- Extreme weather adjustments are assumed for capacity in the months of November through February. These adjustments vary monthly from 1,400 to 1,950 peak megawatts under the medium load forecast; and
- The IOUs do not make new long-term general requirements load purchases from BPA.

### ***Federal Firm Energy Loads***

The 1998 study uses the same load forecast used for the 1997 study. The Federal system firm loads include BPA's firm DSI loads,<sup>2</sup> sales to Federal agencies, and current obligations to regional public agencies and IOUs under their power sales contracts,<sup>3</sup> less public agency

---

<sup>1</sup> Fiscal Year (FY) is the 12-month period October 1 through September 30. For example FY 2001 is October 1, 2000, through September 30, 2001.

<sup>2</sup> This study includes the Federal DSI firm loads through OY 2001, per contracts signed through December 31, 1996. In OY 2002, and through the remainder of the study period, the Federal DSI loads are assumed to continue at their OY 2001 level.

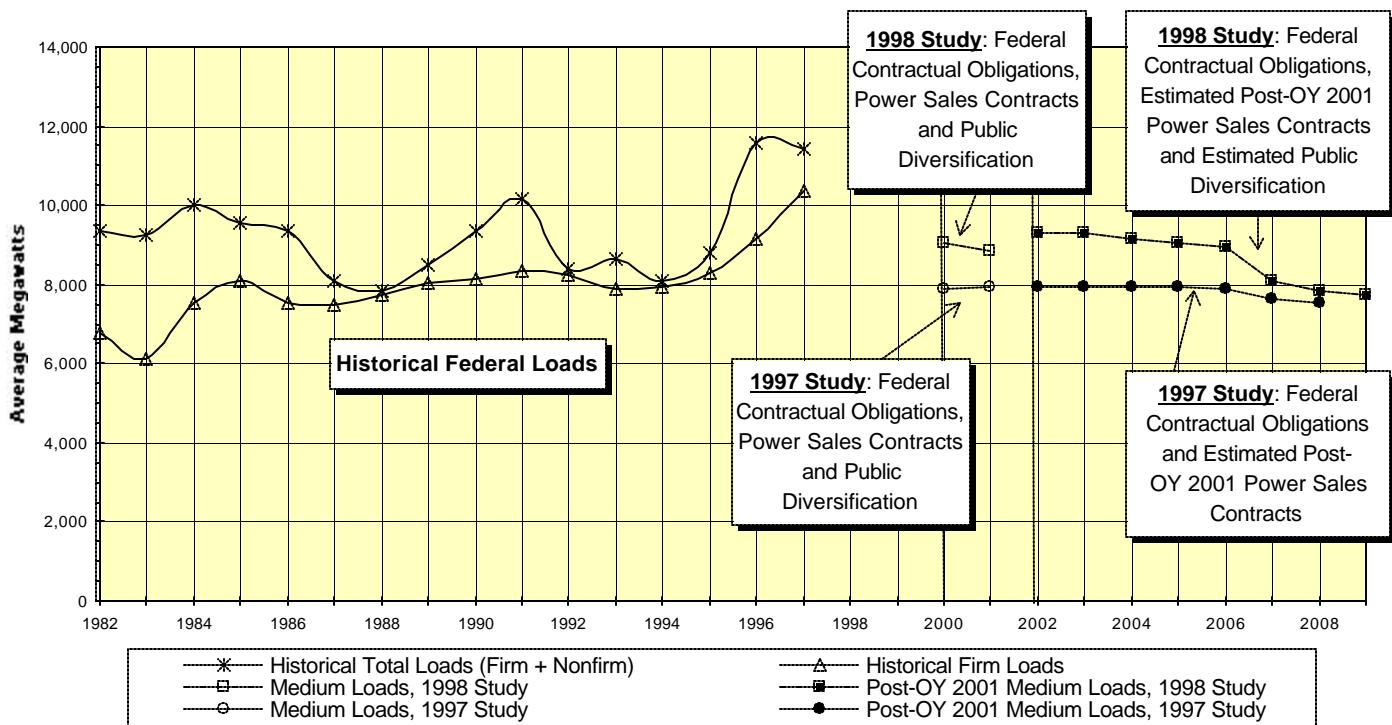

<sup>3</sup> This study includes Federal, public agency and IOU obligations through OY 2001, per contracts that expire between June 30 and September 30, 2001. BPA's obligations are assumed to continue at the

diversification from BPA's Load Commitment Exercise, which reduced BPA's power sales contract obligations through September 30, 2001. The Federal system firm energy loads under the medium load forecast for OY 1999-2000 through 2008-09 are shown in figure 2, below. The methods and assumptions used to complete this year's load forecast are discussed under Load Forecasting, page 3.

The Federal loads include all intraregional contracts for export of firm surplus power to Southwest utilities. The Federal firm energy loads under the medium load forecast are presented on line 15 of exhibit 1, page 44, and monthly for the medium load forecast for OY 1999-2000, 2003-04, and 2008-09 assuming 1937 water conditions in exhibits 2 through 4, pages 47 through 53.

**Figure 2**

**Federal Energy Load Projections<sup>1 2</sup>—1998 BPA Forecast  
Medium Loads**

FY 2001 level in OY 2002 and through the remainder of the study period under similar contracts for firm load service.

<sup>1</sup> The components of BPA's historical loads are: (1) total loads, which include both firm and nonfirm energy sales, and (2) firm loads, which include only BPA's firm energy sales. BPA's future loads depicted in figure 2, above, include only firm energy obligations.

<sup>2</sup> The Federal firm energy load projections assume that BPA's power sales remain at the OY 2001 level through the remainder of the study period. For OY 2002 and beyond, however, these projections are uncertain because BPA's firm contractual obligations will be negotiated and executed over the next two years and the impacts of deregulating the wholesale and retail electric utility industry are unknown.

## **Federal Firm Peak Loads**

Figure 3, page 15, shows the Federal firm peak loads for OY 1999-2000, 2003-04, and 2008-09 under the medium load forecast.<sup>1</sup> The figure shows the expected 1-hour monthly demand under the 1998 BPA load forecast, and includes extreme weather adjustments.

Extreme weather conditions were assumed for the months of November through February and estimate a 5-percent probability that the actual peak load will be exceeded. The extreme weather adjustment includes possible increased obligations on BPA by the public agencies during extreme weather conditions. In the remaining months of March through October, the peak loads estimate normal weather conditions with a 50-percent probability that the actual peak load will be exceeded. The peak load projections are reduced by a diversity component to address the fact that all peak electrical demands do not occur simultaneously throughout the region.

This study assumes that public agencies will purchase capacity from BPA under their power sales contracts to meet peak loads not served by their own resources.

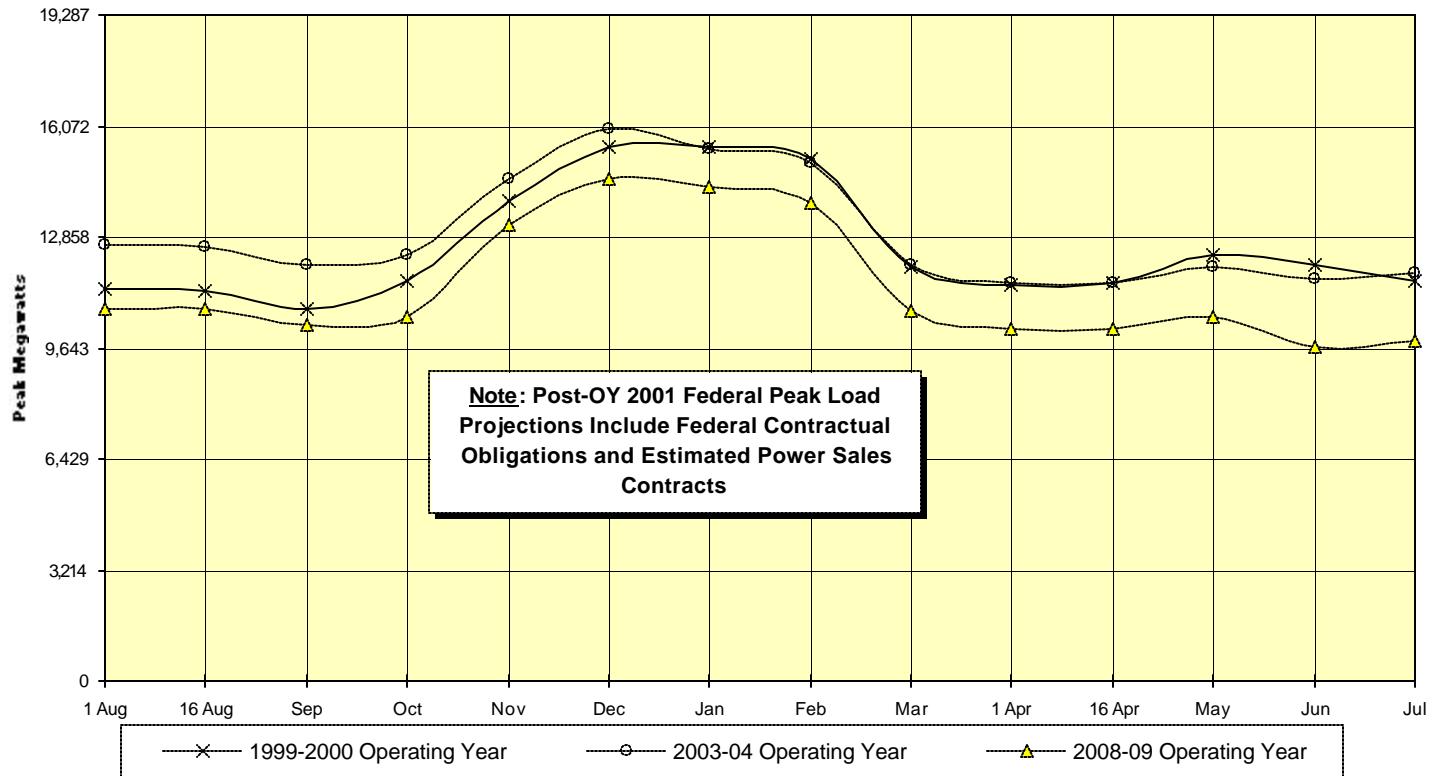

The monthly Federal firm peak loads are presented on line 15 and the monthly extreme weather obligations are presented on lines 44 and 47 of exhibits 6 through 8, pages 57 through 63. These forecasts assume Federal obligations under 1937 water conditions.

---

<sup>1</sup> The Federal peak load projections assume that BPA's power sales contract obligations remain at the FY 2001 level through the remainder of the study period. For OY 2002 and beyond, however, these projections are highly uncertain because BPA's contractual obligations and the impacts of deregulating the wholesale and retail electric utility industry are unknown.

**Figure 3**

**Federal Monthly Firm Peak Load Projections<sup>1</sup> Under Extreme Weather Conditions<sup>2</sup> for OY 1999-2000, 2003-04, and 2008-09**  
**Medium Loads**

### **Existing Federal Firm Resources**

The Federal system hydro resources from which BPA markets power are shown in table 3, page 16. BPA also markets power purchased from non-Federally owned resources. In addition, BPA's capacity/energy exchange contracts provide marketable energy to BPA as payment for the capacity BPA delivers.

The non-Federally owned resources, return energy associated with BPA's existing capacity/energy exchanges, contractual resources, and other BPA hydro-related contracts are shown in table 4, page 17.

Combined, these resources represent BPA's available firm resources. A detailed listing of all Federal generating resources is contained in the 1998 Pacific Northwest Loads and Resources Study Technical Appendix (available July 1999 on BPA's external web site at <http://www.bpa.gov/power/whitebook98>).

<sup>1</sup> After OY 2001, BPA's public and DSI firm load projections assume that BPA's power sales contract obligations remain at the FY 2001 level through the remainder of the study period. For OY 2002 and beyond, however, these projections are highly uncertain because BPA's firm contractual obligations and the impacts of deregulating the wholesale and retail electric utility industry are unknown.

<sup>2</sup> Extreme weather conditions in November, December, January, and February assume a 5-percent probability that the peak load will be exceeded.

**Table 3**  
**Federal System Hydroelectric Projects**

| Project  | Initial Year of Service | Number of Units | Nameplate Rating (MW) | Instantaneous Generating Capacity <sup>1</sup> (peak MW) | Firm Energy <sup>2</sup> |
|--|-------------------------|-----------------|-----------------------|--|--------------------------|
| <b>U.S. BUREAU OF RECLAMATION HYDROELECTRIC PROJECTS</b>   |                         |                 |                       |  |                          |
| Grand Coulee   | 1941                    | 27              | 6,465.0               | 5,419  | 1,784                    |

Table 5, page 18, summarizes the Federal system firm energy resources and contracts available to meet Federal firm loads for OY 1999-2000. Federal system firm energy resources are comprised as follows: 77 percent from hydroelectric power, 10 percent from one nuclear power plant, and 13 percent from BPA's firm contracts.

<sup>1</sup> Operational capacity is 70 MW, but is restricted in January.

**Table 5**

---

***Federal Firm Energy Surplus/Deficit Projections***

This analysis includes all operating requirements currently adopted by the hydroelectric project owners and the firm planning assumptions for assured resource capability in the PNCA and from the NMFS 1995 and 1998 BOs.

The Federal firm energy surplus/deficit projections under the medium load forecast for OY 1999-2000 through 2008-09 are presented in table 6, page 19, and graphically shown in figure 4, page 20.

The components of the 10-year critical period average Federal energy loads and resources balances under the medium load scenario are presented in exhibit 1, line 42, page 44.

To show the monthly variability of the loads and resources study, the monthly Federal system energy components assuming medium loads under 1937 water conditions for OY 1999-2000, 2003-04, and 2008-09 are shown in exhibits 2 through 4, pages 47 through 53.

---

<sup>1</sup> Includes Federally and non-Federally owned projects.

<sup>2</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

**Table 6**

---

**Federal Firm Energy Surplus/Deficit Projections Assuming Existing Loads,  
Resources, and Contracts Under 1936-37 Water Conditions**
**Energy in Average Megawatts**

| Medium<br><br>Load<br><br>Scenario | Operating Year <sup>1</sup> |      |                   |      |      |      |      |      |      |      |
|------------------------------------|-----------------------------|------|-------------------|------|------|------|------|------|------|------|

---

<sup>1</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

<sup>2</sup> After OY 2001, BPA's public and DSI firm load projections assume that BPA's power sales contract obligations remain at the FY 2001 level through the remainder of the study period. For OY 2002 and beyond, however, these projections are highly uncertain because BPA's firm contractual obligations and the impacts of deregulating the wholesale and retail electric utility industry are unknown.

**Figure 4**  
**Federal Firm Annual Energy Surplus/Deficit Projections**

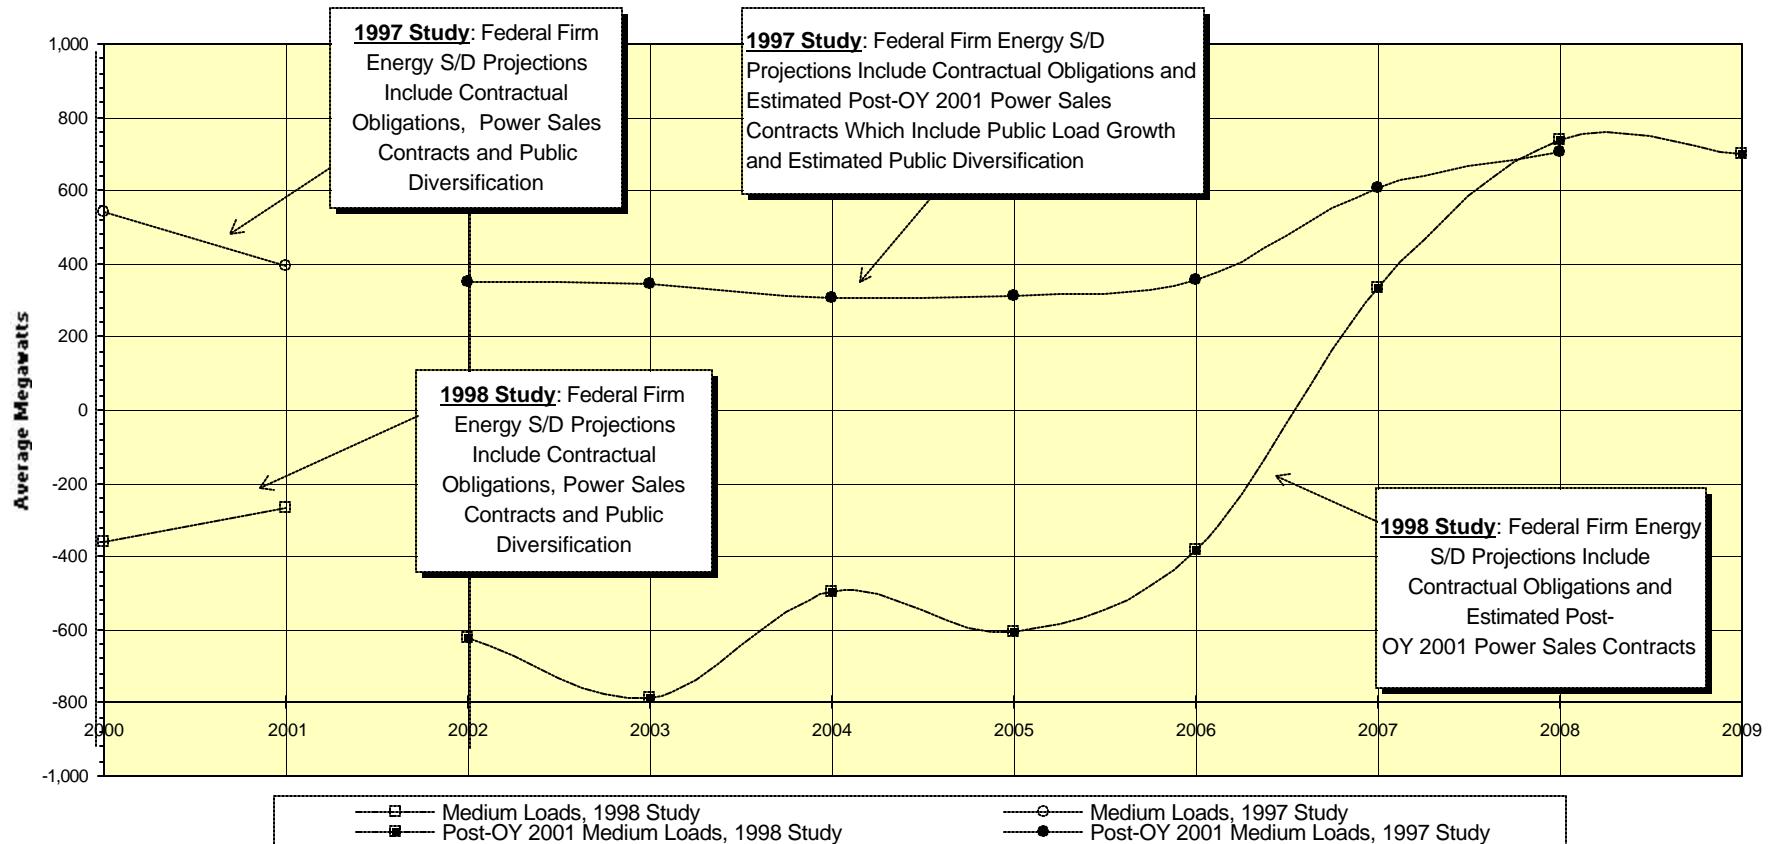

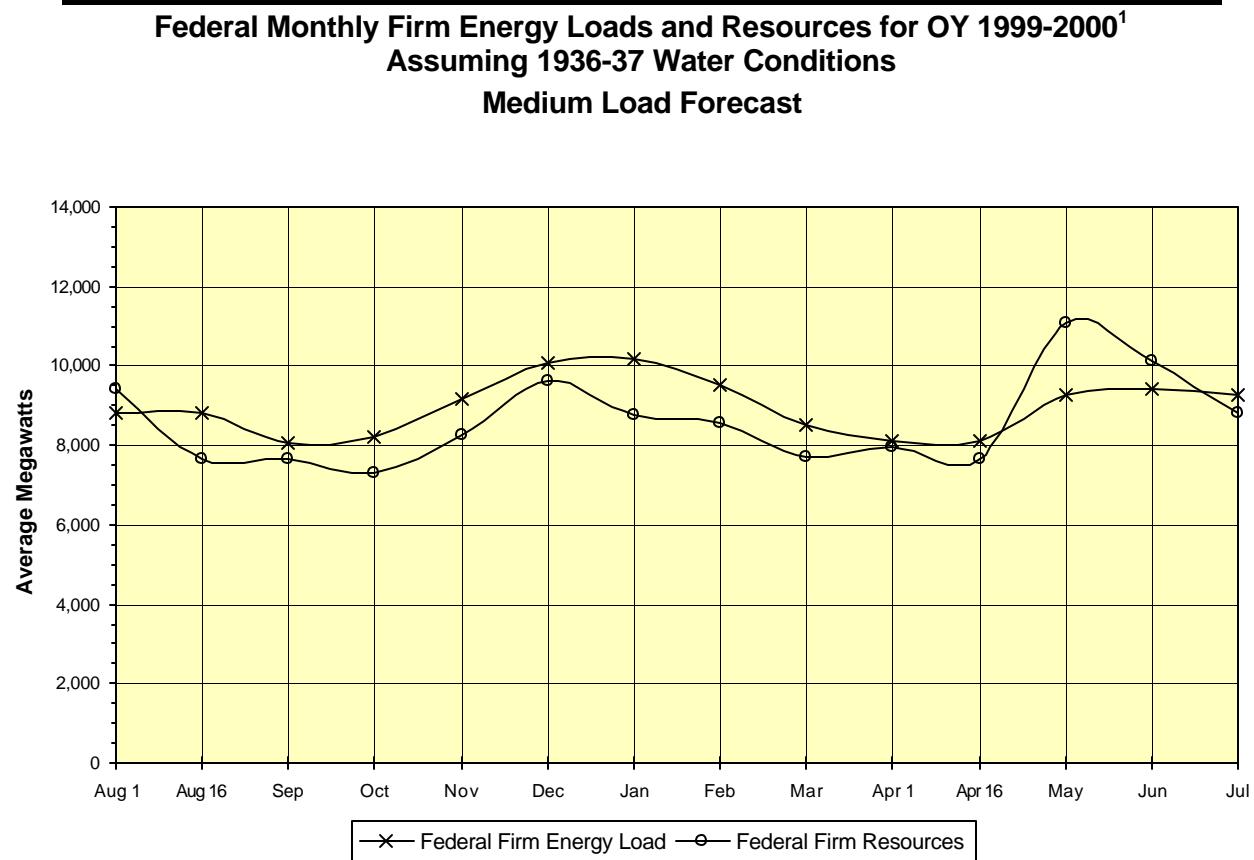

Figure 5, below, shows the monthly Federal system firm energy loads and resources for OY 1999-2000. This figure illustrates the timing of Federal system monthly surpluses and deficits in any operating year created by incorporating the NMFS 1995 and 1998 BOs.

Under critical water conditions, Federal hydro resources are generally operated at lower power production levels during the January through March timeframe because the reservoirs store water then to release in the spring to assist fish passage.

**Figure 5**

<sup>1</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

# Section 5: Resource Planning Alternatives

---

## **BPA's Resource Strategy**

As previously discussed, Federal hydro system operations have changed to reflect implementation of the NMFS 1995 and 1998 BOs. In response to these changes, BPA has changed its traditional least cost resource planning approach by adopting a new resource strategy. For the immediate future, BPA's resource strategy is to rely on available power purchases, off-system storage, or exchanges to serve any incremental power needs should loads exceed resources within a month. Information on this resource strategy is contained in BPA's Interim Resource Strategy (September 1995). In contrast, the White Book analysis differs from BPA's resource strategy because provisions of the current utility power sales contract do not allow BPA to count "uncommitted" purchase power as a resource available to serve firm load. The following alternatives are being considered as possible means of meeting BPA's future load commitments:

**Probabilistic Analysis.** The hydro system generation varies greatly from one year to another, mainly due to the weather in the Pacific Northwest and Canada. In most years, there is an abundance of water so that hydro generation along with Pacific Northwest thermal resources and contracts can meet all regional energy needs; in other years, lack of water could create shortfalls in some months. Implementing the streamflow requirements of the NMFS 1995 and 1998 BOs changed the shape and ability of the hydro system to meet energy needs in all months.

The region also has experienced a shift in emphasis in power marketing from supply-driven to price-driven. The market changes are dictating changes in resource risk management. One way to manage resource risks is to use probabilistic analyses. Using probabilistic methods in planning allows utilities to evaluate and manage resource risks by using market supply and reducing resource costs, thus helping to provide competitive prices in today's power market.

**Use the Resource Contingency Program (RCP) Option Resources.** This alternative would include the RCP resource options where BPA has non-exclusive contracts for the output of three combustion turbine projects, which carry a combined 854 average megawatts (911 peak megawatts). If these resources are available, they can potentially be obtained within 3 years. Prior to acquiring the output from these projects, BPA must first conduct an administrative hearing and obtain determinations from the Council and the Administrator that the resource is needed and consistent with the Council's Plan. The RCP resources are shown in line 1, table 7, page 24.

**Pacific Southwest Contractual Resource Options.** BPA has long-term firm power sale and capacity/energy exchange contracts with Southern California Edison (SCE) and the cities of Burbank, Glendale, and Pasadena, California.

The above contracts contain provisions throughout their duration for complete or partial termination of energy deliveries if that energy is needed to serve BPA's firm requirements.

The Southwest utilities' contracts allow BPA to terminate surplus firm energy deliveries and convert these contracts to capacity/energy exchange contracts under the following conditions:

- On an annual basis, following a determination by BPA under annual Pacific Northwest Coordination Agreement planning; or
- On 60-days' notice pursuant to Public Law 88-552.

These provisions relieve BPA of its energy delivery obligations and make those resources available to BPA for meeting firm energy requirements. Energy may be acquired from the following categories:

- Energy made available from the termination of energy deliveries under Southwest surplus firm energy sales;
- Exchange energy available upon conversion of the Southwest surplus firm energy sales to capacity/energy exchanges; and
- Under some contracts, supplemental energy available to BPA for purchase upon conversion of the Southwest surplus firm energy sales to capacity/energy exchanges.

In the event that BPA terminates energy deliveries of these Southwest surplus sales and converts them to exchanges, provisions within the contracts, except the city of Burbank's, allow for later reversion to surplus energy sales, depending on the availability of Federal surplus firm energy and certain other conditions.

This study assumes that these contracts retain their power sale status throughout their terms (expiration dates range from OY 2007-08 to 2012-13). Should BPA terminate these sales and convert them to capacity/energy exchanges, exchange energy would become available to BPA as a firm resource. The additional resources resulting from early conversion of these surplus firm power sales to capacity/energy exchanges are shown in table 7, lines 2 and 3, page 24.

**Supplemental Energy.** Under some contracts, if BPA terminates Southwest sales and converts them to capacity/energy exchange contracts, BPA may elect to purchase supplemental energy in that same operating year. The amount of additional resources that would become available upon early conversion of these contracts and purchase of supplemental energy is shown in table 7, line 4.

**Non-Treaty Storage.** On July 9, 1990, BC Hydro and BPA signed an agreement increasing United States-Canadian coordination of the Columbia River system. This agreement cooperatively manages 4.5 million acre-feet of non-treaty hydro storage through June 30, 2003. Studies on the increased coordination indicate a possible increase of 300 average megawatts in firm energy for the combined Canadian and Pacific Northwest systems. Fifty percent of the benefit, 150 average megawatts, is available to the United States. The Federal system share is 115 average megawatts.

This energy, however, is not as valuable as a firm resource because non-treaty storage has a lower refill priority than primary storage reservoirs. Therefore, BPA intends to use the non-treaty storage as a resource that will increase flexibility in operating the hydro system when needed. Since this energy may not be available in every year, BPA needs to use probability methods for its inclusion as a firm resource, but has not done so for this 1998 loads and resources study. However, it may be included as a firm resource in future studies. The Federal system share of non-treaty storage energy is shown in table 7, line 5.

### **Federal Firm Capacity Surplus/Deficit Projections**

Figure 6, page 25, shows the monthly Federal system peak loads and resources for OY 1999-2000 under 1937 water conditions assuming extreme weather conditions during the months of November through February. This figure illustrates the timing and magnitude of the Federal system capacity surpluses and deficits in any operating year and impacts created during extreme winter weather.

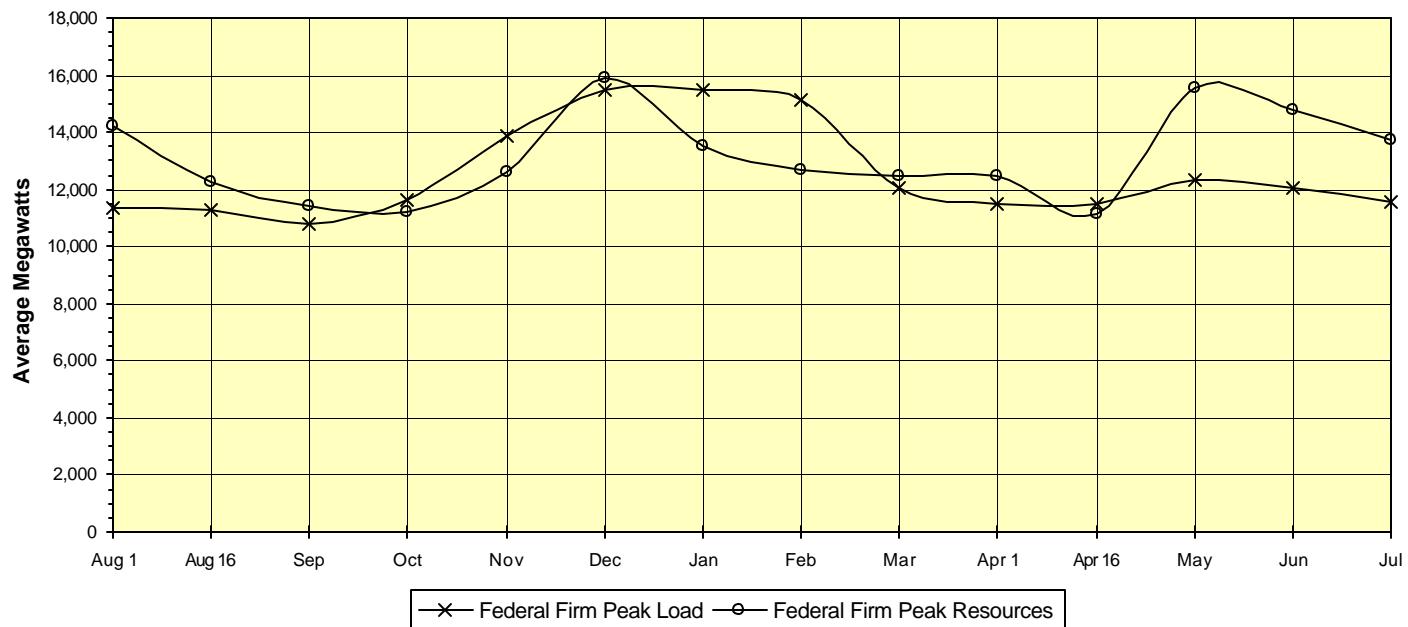

---

<sup>1</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

<sup>2</sup> These resources could be available as early as August 2001. Resource potential is 854 average megawatts.

**Figure 6**

**Federal Monthly Capacity Loads and Resources Under Extreme Weather Conditions for OY 1999-2000**

The study assumes that there are no nighttime return problems from future capacity sales. Nighttime return problems can occur when replacement energy from capacity sales, combined with minimum hydro generation, the output from other Federal resources, and other Federal contract returns are greater than BPA's nighttime load. The following factors contribute to nighttime return problems:

- Low Federal system loads;
- Additional nonpower hydro requirements that dictate minimum streamflows; and
- The inability of NWE's WNP-2 nuclear resource to cycle from day to night.

These requirements restrict the ability to accept nighttime return energy, even though there is surplus generating capability during the daytime. These constraints are common in summer and fall, when BPA's nighttime loads are low. BPA's future Federal surplus capacity transactions may include provisions to:

- Limit return energy to a percentage of contract demand;
- Defer energy returns to a time more favorable to system operation; or
- Request cash payment in lieu of return energy.

BPA's surplus firm capacity values take into account the following Federal system hydro constraints:

- Limitations on moving water between projects, including upstream storage;
- Pondage limitations due to hydraulic imbalance from reservoir to reservoir; and

- Navigation and recreation constraints, including restrictions on the rate of rise or fall of tailwater and forebay elevations.

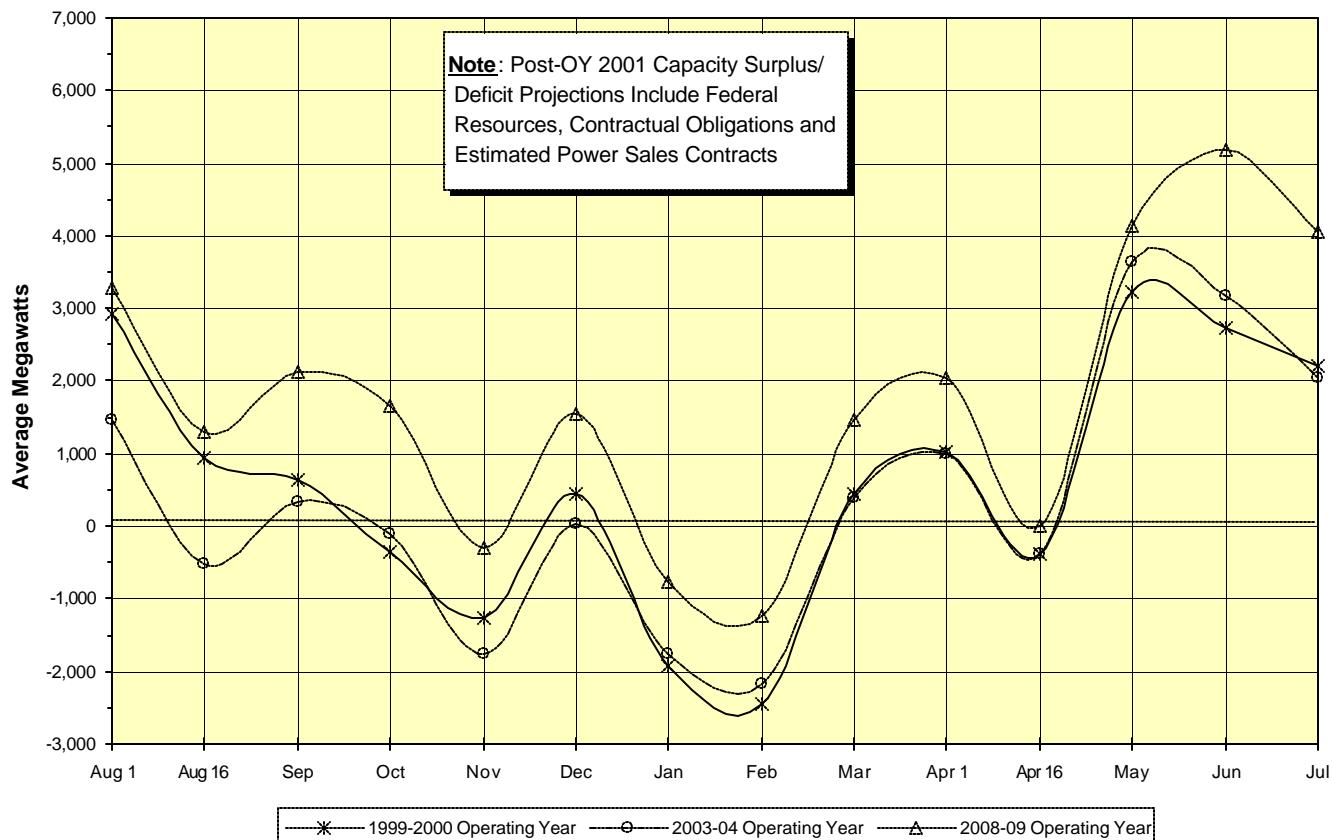

If BPA makes additional market purchases, any added capacity will increase capacity available to the Federal system.

Figure 7, below, shows the Federal firm capacity surplus/deficit projections under the medium load forecast for OY 1999-2000, 2003-04, and 2008-09. This analysis incorporates all operating requirements currently adopted by the hydroelectric project owners and the firm planning assumptions from the NMFS 1995 and 1998 BOs.

A 10-year summary of Federal capacity surplus/deficit projections under the medium load forecast, assuming extreme weather conditions, is presented in exhibit 5, page 55. The monthly variability of the Federal system capacity components that comprise the loads and resources study, and assuming medium loads for extreme weather under 1937 water conditions for OY 1999-2000, 2003-04, and 2008-09, are shown on line 48 in exhibits 6 through 8, pages 57 through 63.

**Figure 7**

**Federal Monthly Capacity Surplus/Deficit Projections Under Extreme Weather Conditions**

## **Federal Loads and Resources Comparison—Energy**

Table 8, page 30, shows changes in the energy analysis of the 1998 Pacific Northwest Loads and Resources Study compared to the 1997 study for OY 1999-2000 through 2008-09. The table lists the Federal firm energy surplus/deficit projections for the 1997 study and changes since last year to obtain the current firm energy surplus under the medium load forecast. For “Load Changes,” table 8, line 2, positive values indicate load increases and negative values show load decreases. Similarly, for “Resource Changes,” table 8, line 3, positive values indicate additional resource availability and negative values show decreases in resource availability. Federal planned resource acquisitions for which BPA has not yet contracted are not included as firm resources. In this analysis, BPA considered its Pacific Southwest contracts in power sales mode through the study horizon.

Additionally, the projections for OY 2002 and beyond are highly uncertain because BPA’s firm contractual obligations and the impacts of deregulating the wholesale and retail electric utility industry are unknown.

Changes were based on the following updates in loads, contracts, and resources:

### **DSI Federal Firm Loads**

This study assumes the current DSI power sales contracts and block sales, which have been updated for this study.

### **Public Agencies’ Power Sales Contract Purchases**

The small and non-generating public agencies’ energy purchases are different due to new public agencies’ contract purchases and variations in the new hydro regulations used in this study.

### **Exports**

The 1998 White Book analysis includes the following new or changed Federal export transactions: BPA to Aneheim, capacity/energy exchange and capacity sale; BPA to Azusa, power exchange and capacity sale, with power sale and energy sale ended; BPA to Banning, power exchange and capacity sale, with energy sale and power sale ended; BPA to BART, power sale; BPA to Colton, power exchange and capacity sale, with energy sale and power sale ended; BPA to Farmington, power sale; BPA to Federal agencies, power sale; BPA to New Energy Ventures, power sale ended; BPA to New Energy Ventures-SP, power sale ended; BPA to other entities, power sale; BPA to Palo Alto, capacity sale and seasonal energy exchange; BPA to Pasadena, capacity/energy exchange and seasonal exchange, with power sale ended; BPA to Riverside, capacity/energy exchange, capacity sale, and capacity/diversity exchange; BPA to SCE, power sale, capacity/energy exchange, and option capacity; and BPA to SCE Source, power sale.

BPA’s power sale and capacity/energy agreements with the cities of Burbank, Glendale, and Pasadena, and to SCE, are shown in power sales mode through the study horizon. BPA to SCE option capacity is shown through OY 2004. BPA renegotiated its contract with the M-S-R Public Agency (M-S-R), whose members include the Modesto Irrigation District and the cities of Santa Clara and Redding, California, to continue as a power sale through April 15, 2013.

### **Contracts Out**

This analysis has the following new or changed BPA intraregional contracts out: BPA to AVC (formerly WWP), supplemental and entitlement capacity, WNP-3 settlement, and deferred power exchange; BPA to Bandon, power sale; BPA to Benton County PUD, power sale ended; BPA to Big Bend Electric Cooperative, summer seasonal product; BPA to

Chelan, supplemental and entitlement capacity; BPA to Clatskanie, power sale; BPA to Colockum, supplemental and entitlement capacity; BPA to Columbia River PUD, power sale; BPA to Cowlitz County PUD presubscription power sale, power sale, and supplemental and entitlement capacity; BPA to Douglas County PUD, power sale and supplemental and entitlement capacity; BPA to EWEB, presubscription power sale and supplemental and entitlement capacity; BPA to City of Forest Grove, power sale and supplemental and entitlement capacity; BPA to Grant County PUD, power sale and supplemental and entitlement capacity; BPA to Kittitas County PUD, supplemental and entitlement capacity; BPA to Lewis County PUD, power sale; BPA to Lower Valley Electric Cooperative, power sale; BPA to Mason County PUD, power sale; BPA to the City of McMinnville, power sale and supplemental and entitlement capacity; BPA to the City of Monmouth, power sale; BPA to MPC, power sale; BPA to Nespelem Valley Electric Cooperative, summer seasonal product; BPA to Northern Wasco PUD, power sale; BPA to Okanogan, supplemental and entitlement capacity; BPA to other entities, power sales; BPA to small, nongenerating public utilities, presubscription power sales, with Hungry Horse power sales ending; BPA to PGE, supplemental and entitlement capacity; BPA to PP&L, supplemental and entitlement capacity, capacity sale, power sale for Southern Oregon, and Centralia standby; BPA to PGE, power sale and capacity sale; BPA to PSE, supplemental and entitlement capacity, WNP-3 settlement changed, and power exchange ended; BPA to Raft River Electric Cooperative ended; BPA to Richland, Ormet power sale; BPA to Salem, power sale; BPA to SCL, supplemental and entitlement capacity; BPA to Snohomish County PUD, power sale; BPA to Springfield Utility Board, presubscription power sale and power sale; BPA to Tillamook County PUD, power sale; BPA to TPU, supplemental and entitlement capacity; and BPA to United Electric Cooperative, power sale.

### **Regulated Hydro**

This year's study assumes the 12-month annual average, consistent with PNCA monthly assured capability for Federal resources, using 1937 water conditions under the NMFS 1995 and 1998 BOs when analyzing the Federal system firm hydro capability. This study produces slightly less energy than the 1997 analysis over the study horizon.

### **Independent Hydro**

Independent hydro generation is generally the same between the two analyses.

### **Imports**

This analysis includes the following new or changed interregional contracts: Anaheim to BPA, peak replacement; Azusa to BPA, power exchange and peak replacement; Banning to BPA power exchange and peak replacement; Colton to BPA, power exchange and peak replacement; other entities to BPA, various agreements; Pasadena to BPA, peak replacement; Riverside to BPA, peak replacement; SCE to BPA, peak replacement; PowerEx to BPA for ABC, peak replacement; and PowerEx to BPA for Palo Alto, peak replacement.

### **Contracts In**

This analysis includes the following changes in BPA intraregional contracts in: AVC to BPA, supplemental peak replacement, and WNP-3 settlement; Chelan County PUD to BPA, supplemental peak replacement; Colockum County PUD to BPA, supplemental peak replacement; Cowlitz County PUD to BPA, supplemental peak replacement; Douglas County PUD to BPA, supplemental peak replacement; EWEB to BPA, supplemental peak replacement; City of Forest Grove to BPA, supplemental peak replacement; Grant County PUD to BPA, supplemental peak replacement; Kittitas County PUD to BPA, supplemental peak replacement; City of McMinnville to BPA, supplemental peak replacement; MPC to BPA, peak replacement; Okanogan County PUD to BPA, supplemental peak replacement; other utilities to BPA, power sales and supplemental peak replacement; PGE to BPA,

supplemental peak replacement, peak replacement, and WNP-3 settlement terminated; PP&L to BPA, peak replacement and supplemental peak replacement; and PSE to BPA, supplemental peak replacement and WNP-3 settlement, with surplus power exchange ended; SCL to BPA, supplemental peak replacement; and TPU to BPA, supplemental peak replacement.

| <b>4. 1998 Final White Book Federal Firm Surplus/Deficit<br/>(line 1 – line 2 + line 3)</b>                             | <b>-358</b> | <b>-266</b> | <b>-622</b>             | <b>-785</b>             | <b>-499</b>             | <b>-609</b>             | <b>-383</b>             | <b>335</b>              | <b>739</b>              |

<sup>1</sup> The 1997 and 1998 White Book analyses both assume a 12-month annual average under 1937 water conditions.

<sup>2</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

<sup>3</sup> After OY 2001, BPA's public agency and DSI firm requirements shown on lines 2a, 2b, and 2e assume that BPA's power sales contracts and public agency load diversification remain at the FY 2001 level through the remainder of the study period. In OY 2002 and beyond, however, these projected requirements are highly uncertain because BPA's firm contractual obligations and the impacts of deregulating the wholesale and retail electric utility industry are unknown.

<sup>4</sup> The DSI loads were updated for the 1998 analysis.

<sup>5</sup> Exports include: power sale-capacity/exchange energy contracts with the cities of Burbank, Glendale, and Pasadena, and with SCE, are assumed to be in power sales mode through the study horizon.

<sup>6</sup> Imports include: option energy from SCE through OY 2004. Supplemental energy from the cities of Burbank, Glendale, and Pasadena, and from SCE, are considered to be BPA resource options and are not included in this study.

### **Federal Loads and Resources Comparison—Capacity**

Table 9, page 32, shows changes in the capacity analysis of the 1998 Pacific Northwest Loads and Resources Study compared to the 1997 study for OY 1999-2000. The table lists the Federal system firm 50-hours-per-week capacity surplus/deficit projections for the 1997 study and changes since last year to obtain the current firm 50-hours-per-week capacity surplus/deficit projections under the medium load forecast. For “Load Changes,” table 9, line 2, positive values indicate load increases and negative values show load decreases. Similarly, for “Resource Changes,” table 9, line 3, positive values indicate additional resource availability and negative values show decreases in resource availability.

Changes were based on those previously discussed in “Federal System Loads and Resources Comparison-Energy,” page 27, plus the following changes which pertain only to the capacity analysis.

### **Federal System Diversity**

The decreases in the obligation of the Federal system to the public agencies and IOUs under their power sales contracts decreased Federal system diversity impacts.

### **Extreme Weather Adjustment**

The extreme weather adjustments changed slightly compared to the 1997 study mainly due to decreases in BPA’s obligation to public agencies under their power sales contracts.

### **Sustained Peaking Adjustment**

The 50-hours-per-week sustained peaking adjustment in this year’s analysis decreased the regional capacity surplus in the hydro regulation versus the 1997 study. This is due to changes in the shaping of the hydro system due to Columbia River Flow Augmentation (CRFA). By storing in the months of January through April 15, the availability of sustained peaking diminished dramatically in some months.

### **Hydro Reserves/Large Thermal Reserves/Spinning Reserves**

The change in reserves is due to variations in hydro and thermal capabilities.

**Table 9**

<sup>1</sup> 1997 and 1998 White Book analyses both assume 12-month annual average water conditions.

<sup>2</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

<sup>3</sup> Exports include: power sales-capacity/energy exchange contracts with the cities of Burbank, Glendale, and Pasadena, and with SCE.

<sup>4</sup> Imports include: option energy from SCE through OY 2004. Supplemental energy from the cities of Burbank, Glendale, and Pasadena, and from SCE, are considered to be BPA resource options and are not included in this study.

## **Section 6: Regional Analysis**

---

The regional loads and resources analysis is based on the following assumptions:

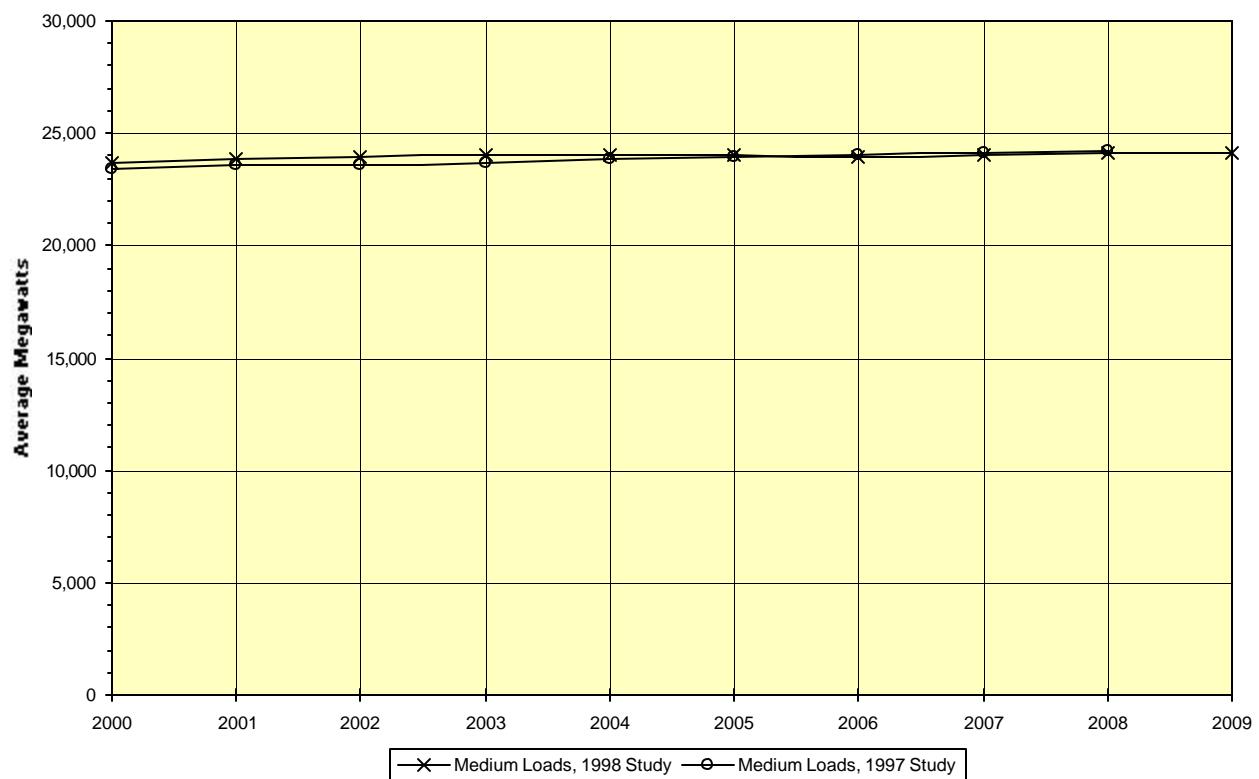

- Capacity surplus/deficit values do not reflect potential nighttime return problems on regional entities;
- The region experiences medium load growth;
- The Pacific Northwest Coordination Agreement, which expires June 30, 2003, is replaced with a like agreement;
- Federal surplus firm power sales and capacity/energy exchange agreements with the cities of Burbank, Glendale, and Pasadena, and with SCE, are shown in power sales mode throughout the study period;
- BPA purchases option energy from SCE through 2004;
- SCE purchases option capacity from BPA through 2004;
- Sustained capacity limits are 50 hours per week; and
- Extreme weather adjustments are assumed for capacity in the months of November through February. These adjustments vary monthly from 3,700 to 4,400 peak megawatts under the medium load forecast.

This analysis includes current operating requirements adopted by the hydroelectric project owners and incorporates the NMFS 1995 and 1998 BOs.

### ***Regional Firm Energy Loads***

Regional firm energy loads for OY 1999-2000 through 2008-09 based on BPA's 1998 White Book forecast are shown in figure 8, page 34. The load projections also include all intraregional contracts made by Pacific Northwest utilities and the Federal system. The regional firm energy load for the medium load forecast is presented on line 4 in exhibit 19, page 82, and the monthly firm loads for OY 1999-2000, 2003-04, and 2008-09 under the medium load forecast are presented in exhibits 20 through 22, pages 86 through 91.

**Figure 8**  
**Regional Firm Annual Energy Loads**  
**1998 BPA Forecast**

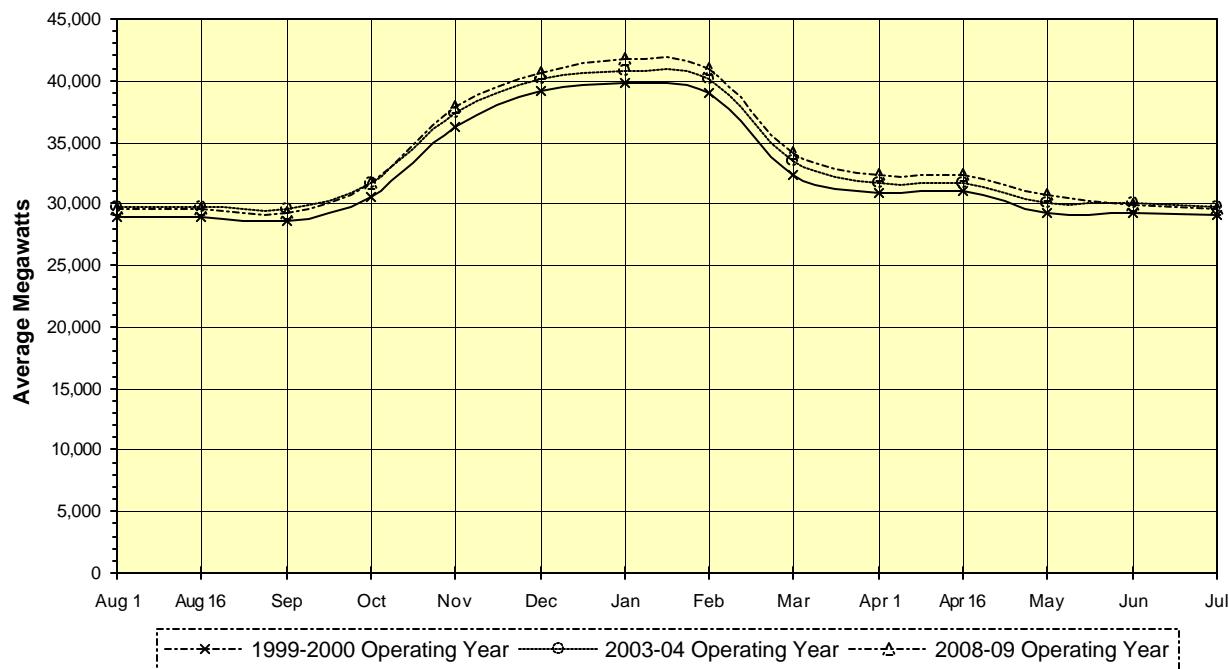

## **Regional Firm Peak Loads**

Figure 9, below, illustrates the regional firm peak loads under the medium load forecast for OY 1999-2000, 2003-04, and 2008-09. The figures show the expected 1-hour monthly demand under BPA's 1998 White Book load forecast and include extreme weather adjustments for capacity. Extreme weather conditions were assumed for the months of November through February and estimate a 5-percent probability that the forecasted peak load will be exceeded. In the months of March through October, the peak loads estimate normal weather conditions with a 50-percent probability that the forecasted peak load will be exceeded. The projected regional peak loads include all intraregional contracts made by Pacific Northwest utilities, including the Federal system. The peak load projections are decreased by a diversity factor due to the fact that all peak electrical demands do not occur simultaneously throughout the region.

The monthly regional firm peak loads are presented on line 4 and the extreme weather adjustments to the regional peak loads are presented on line 34 of exhibits 24 through 26, pages 96 through 101 for the medium load forecast.

**Figure 9**  
**Regional Firm Peak Loads for OY 1999-2000, 2003-04, and 2008-09**  
**Under Extreme Weather Conditions<sup>1</sup>**

<sup>1</sup> Extreme weather conditions in November, December, January, and February assume a 5-percent probability that the peak load will be exceeded.

## **Regional Firm Resources**

Table 10, below, summarizes the regional system resources for OY 1999-2000.

Hydroelectric resources make up a smaller percentage of the regional resources than of the Federal system resources because most of the thermal resources are owned by investor-owned utilities in the region. These thermal resources are composed primarily of IOU-owned coal, gas, and oil-fired projects and NWE's WNP-2 nuclear plant. A detailed listing of all regional generating resources is contained in the 1998 Pacific Northwest Loads and Resources Study Technical Appendix (available July 1999 on BPA's external web site at <http://www.bpa.gov/power/whitebook98>).

**Table 10**

---

### **Regional Firm Resources for OY 1999-2000<sup>1</sup> Based on 1936-37 Water Conditions Capacity Based on January 2000**

| <b>Project Type</b>    | <b>Sustained Peak Capacity (MW)</b> | <b>Generating Peak Capacity % of Total</b> | <b>Firm Energy (aMW) 12-Month Average</b> | <b>Firm Energy % of Total</b> |
|------------------------|-------------------------------------|--|---|-------------------------------|

## **Regional Firm Energy Surplus/Deficit Projections**

This study includes all operating requirements currently adopted by the hydroelectric project owners and the firm planning assumptions from the NMFS 1995 and 1998 BOs.

The regional firm energy surplus/deficit projections for the medium load forecast for OY 1999-2000 through 2008-09 assuming 1936-37 water conditions are presented in table 11 and depicted graphically in figure 10, page 37. The region experiences firm energy deficits in all study years under the medium load forecast.

The regional energy surpluses/deficits for the medium load scenario are presented on line 35 in exhibit 19, page 82. Monthly regional firm energy loads and resources balances under the medium load forecast for OY 1999-2000, 2003-04, and 2008-09 are presented in exhibits 20 through 22, on pages 86 through 91.

---

<sup>1</sup> Operating Year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

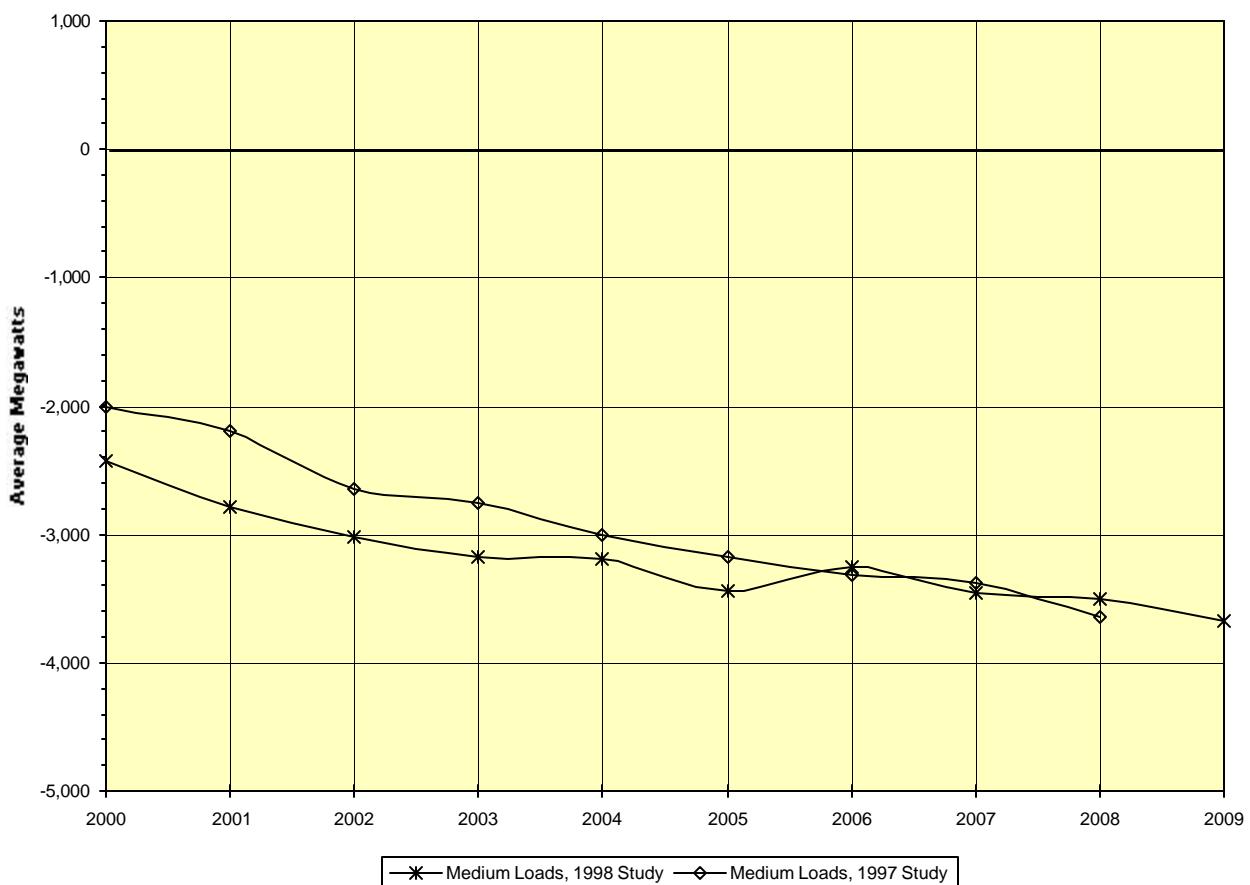

**Table 11**

**Regional Firm Energy Surplus/Deficit Projections Assuming Existing Loads,  
Resources, and Contracts  
Energy in Average Megawatts**

| Medium<br>Load<br>Scenario | Operating Year |        |        |        |        |        |        |        |        |        |

**Figure 10**

**Regional Firm Annual Energy Surplus/Deficit Projections**

### ***Regional Firm Capacity Surplus/Deficit Projections***

Figure 11, page 39, shows the region's firm 50-hours-per-week capacity surplus/deficit projections under the medium load forecast for OY 1999-2000, 2003-04, and 2008-09. This analysis incorporates all operating restrictions currently adopted by the hydroelectric project owners and the firm planning assumptions from the NMFS 1995 and 1998 BOs.

The regional firm capacity surpluses/deficits incorporate the regional assumptions on page 33.

It is important to note that the capacity surplus values do not reflect potential nighttime return problems on the region's system. Peaking replacement energy from capacity sales is returned at night, when the output of the hydro system and other regional resources could be greater than the region's nighttime load. The following factors contribute to nighttime overgeneration:

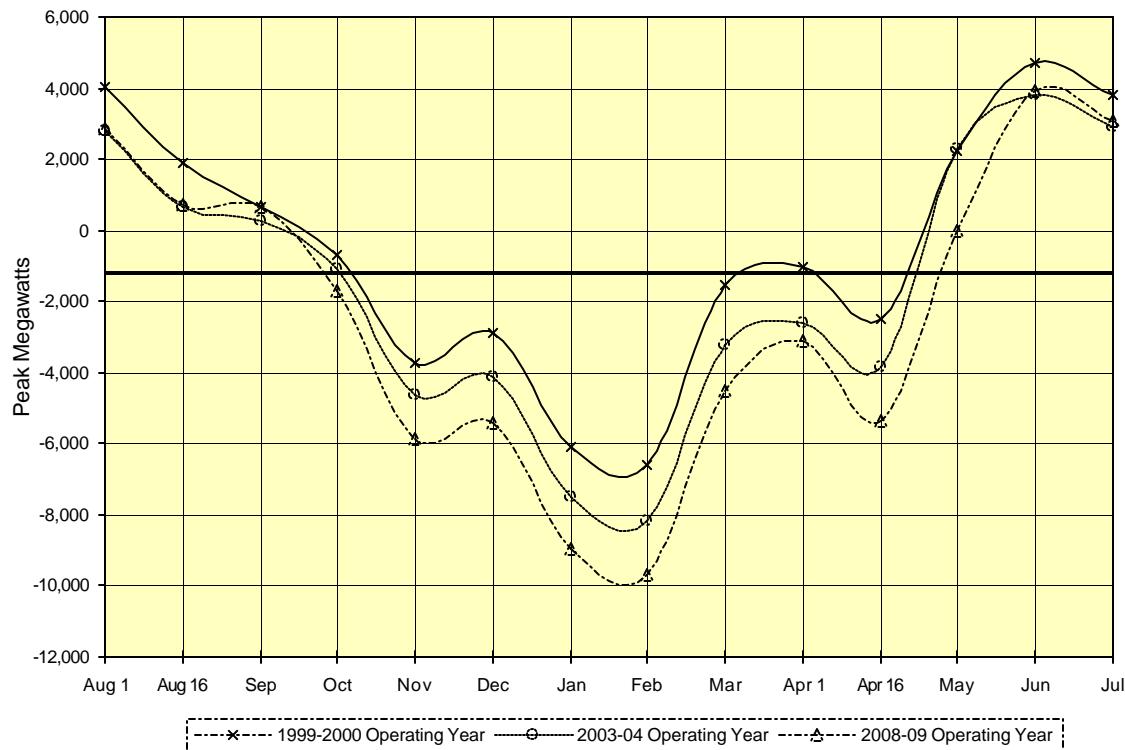

- Low regional system loads;
- Nonpower hydro requirements that dictate minimum streamflows; and
- The inability of the region's thermal resources to cycle from day to night.

These requirements restrict the ability to accept nighttime return energy, even though there is surplus generating capability during the daytime. These requirements are common in summer and fall, when the region's nighttime loads are low. Depending on water availability and economic conditions, return energy from these contracts could create low-priced forced energy sales and may reduce the region's ability to meet firm loads.

A 10-year summary of regional firm capacity surplus/deficit projections for the medium load forecast is shown in exhibit 23, page 93. Monthly firm capacity surpluses/deficits under the medium forecast for OY 1999-2000, 2003-04, and 2008-09 are presented in exhibits 24 through 26 on pages 96 through 101.

**Figure 11**

**Regional Monthly Firm Capacity Surplus/Deficit Projections Under Extreme Weather Conditions<sup>1</sup>**

<sup>1</sup> Extreme weather conditions in the months of November, December, January, and February assume a 5-percent probability that the peak load will be exceeded.

NOTE: 1. THE FOLLOWING CONTRACTS ARE SHOWN AS POWER SALES THROUGH THE STUDY HORIZON.

A. BPA TO BURBANK: PS & C/N/X      C. BPA TO PASADENA: PS & C/N/X

B. BPA TO GLENDALE: PS & C/N/X      D. BPA TO SCE: PS & C/N/X

2. BPA TO PSP&L: PS & SPX CONVERTS TO A SEASONAL POWER EXCHANGE OY 2002.

3. SCE TO BPA: OPTION ENERGY IS INCLUDED THROUGH OY 2004.

4. BPA TO SCE: OPTION CAPACITY IS INCLUDED THROUGH OY 2004.

5. THE FOLLOWING CONTRACTS ARE RESOURCE OPTIONS AND NOT INCLUDED THROUGH THE STUDY HORIZON.

A. BGP TO BPA: SUPPLEMENTAL ENERGY    B. SCE TO BPA: SUPPLEMENTAL ENERGY

NOTE: 1. THE FOLLOWING CONTRACTS ARE SHOWN AS POWER SALES THROUGH THE STUDY HORIZON.

A. BPA TO BURBANK: PS & C/N/X      C. BPA TO PASADENA: PS & C/N/X

B. BPA TO GLENDALE: PS & C/N/X      D. BPA TO SCE: PS & C/N/X

2. BPA TO PSP&L: PS & SPX CONVERTS TO A SEASONAL POWER EXCHANGE OY 2002.

3. SCE TO BPA: OPTION ENERGY IS INCLUDED THROUGH OY 2004.

4. BPA TO SCE: OPTION CAPACITY IS INCLUDED THROUGH OY 2004.

5. THE FOLLOWING CONTRACTS ARE RESOURCE OPTIONS AND NOT INCLUDED THROUGH THE STUDY HORIZON.

A. BGP TO BPA: SUPPLEMENTAL ENERGY    B. SCE TO BPA: SUPPLEMENTAL ENERGY

NOTE: 1. THE FOLLOWING CONTRACTS ARE SHOWN AS POWER SALES THROUGH THE STUDY HORIZON.

- A. BPA TO BURBANK: PS & C/N/X      C. BPA TO PASADENA: PS & C/N/X
- B. BPA TO GLENDALE: PS & C/N/X      D. BPA TO SCE: PS & C/N/X

2. BPA TO PSP&amp;L: PS &amp; SPX CONVERTS TO A SEASONAL POWER EXCHANGE OY 2002.

3. SCE TO BPA: OPTION ENERGY IS INCLUDED THROUGH OY 2004.

4. BPA TO SCE: OPTION CAPACITY IS INCLUDED THROUGH OY 2004.

5. THE FOLLOWING CONTRACTS ARE RESOURCE OPTIONS AND NOT INCLUDED THROUGH THE STUDY HORIZON.

- A. BGP TO BPA: SUPPLEMENTAL ENERGY      B. SCE TO BPA: SUPPLEMENTAL ENERGY

NOTE: 1. THE FOLLOWING CONTRACTS ARE SHOWN AS POWER SALES THROUGH THE STUDY HORIZON.

A. BPA TO BURBANK: PS & C/N/X      C. BPA TO PASADENA: PS & C/N/X

B. BPA TO GLENDALE: PS & C/N/X      D. BPA TO SCE: PS & C/N/X

2. BPA TO PSP&L: PS & SPX CONVERTS TO A SEASONAL POWER EXCHANGE OY 2002.

3. SCE TO BPA: OPTION ENERGY IS INCLUDED THROUGH OY 2004.

4. BPA TO SCE: OPTION CAPACITY IS INCLUDED THROUGH OY 2004.

5. THE FOLLOWING CONTRACTS ARE RESOURCE OPTIONS AND NOT INCLUDED THROUGH THE STUDY HORIZON.

A. BGP TO BPA: SUPPLEMENTAL ENERGY    B. SCE TO BPA: SUPPLEMENTAL ENERGY

NOTE: 1. THE FOLLOWING CONTRACTS ARE SHOWN AS POWER SALES THROUGH THE STUDY HORIZON.

A. BPA TO BURBANK: PS & C/N/X      C. BPA TO PASADENA: PS & C/N/X

B. BPA TO GLENDALE: PS & C/N/X      D. BPA TO SCE: PS & C/N/X

2. BPA TO PSP&L: PS & SPX CONVERTS TO A SEASONAL POWER EXCHANGE OY 2002.

3. SCE TO BPA: OPTION ENERGY IS INCLUDED THROUGH OY 2004.

4. BPA TO SCE: OPTION CAPACITY IS INCLUDED THROUGH OY 2004.

5. THE FOLLOWING CONTRACTS ARE RESOURCE OPTIONS AND NOT INCLUDED THROUGH THE STUDY HORIZON.

A. BGP TO BPA: SUPPLEMENTAL ENERGY      B. SCE TO BPA: SUPPLEMENTAL ENERGY

---

## FEDERAL SYSTEM FOOTNOTES

---

### For Exhibits 1 through 8

1. BPA's small and nongenerating public agencies' purchases are requirements these agencies place on BPA under their power sales contracts and BPA's partnership program. BPA's obligation is each agency's net firm load requirement not served by its own dedicated resources. These contracts expire between June 30, 2001, and September 30, 2001; however, they are assumed to remain at the OY 2001 level through the study period.
2. BPA's exports include: BPA to Anaheim, capacity/energy exchange and capacity sale; BPA to Azusa, power exchange and capacity sale; BPA to Banning, power exchange and capacity sale; BPA to BART, power sale; BPA to Burbank, power sale and capacity/energy exchange; BPA to Colton, power exchange and capacity sale; BPA to Farmington, power sale; BPA to Federal agencies, power sale; BPA to Glendale, power sale and capacity/energy exchange; BPA to M-S-R, power sale; BPA to other entities, power sales; BPA to Palo Alto, capacity sale and seasonal energy exchange; BPA to Pasadena, power sale, capacity/energy exchange and seasonal energy exchange; BPA to Riverside, capacity/energy exchange, capacity sale and diversity exchange; BPA to SCE, power sale, capacity/energy exchange, environmental storage, and option capacity; BPA to SCE Source, power sale; BPA to BC Hydro for Canadian Entitlement; and BPA's Northwest-Southwest Intertie losses.
3. BPA's contracts out include: BPA to AVC, power sale, supplemental and entitlement capacity, deferred power exchange and WNP-3 settlement; BPA to Bandon, power sale; BPA to Big Bend Electric Cooperative, summer seasonal product; BPA to Central Electric Cooperative, summer seasonal product; BPA to Chelan County PUD, supplemental and entitlement capacity sale; BPA to the city of Ashland, power sale; BPA to the city of Idaho Falls, power sale; BPA to Colockum, supplemental and entitlement capacity; BPA to Columbia Basin Electric Cooperative, summer seasonal product; BPA to Columbia River PUD, power sale; BPA to Columbia Rural Electric Association, summer seasonal product; BPA to Cowlitz County PUD, supplemental and entitlement capacity and power sale; BPA to Douglas County PUD, supplemental and entitlement capacity and power sale; BPA to Eugene Water and Electric Board, supplemental and entitlement capacity and power sale; BPA to city of Forest Grove, supplemental and entitlement capacity and power sale; BPA to Grant County PUD, supplemental and entitlement capacity and power sale; BPA to Harney Electric Cooperative, summer seasonal product; BPA to Idaho Power Company for Harney and Wells; BPA to Inland Power and Light, summer seasonal product; BPA to Kittitas County PUD, supplemental and entitlement capacity; BPA to Lewis County PUD, power sale; BPA to Lower Valley, power sale; BPA to Mason County PUD #3, power sale; BPA to city of McMinnville, supplemental and entitlement capacity and power sale; BPA to Midstate Electric Cooperative, summer seasonal product; BPA to Milton-Freewater, power sale; BPA to Modern Electric Cooperative, power sale; BPA to Monmouth, power sale; BPA to Montana Power Company, capacity/energy exchange; BPA to Nespelem Valley Electric Cooperative, summer seasonal product; BPA to Northern Wasco Electric Cooperative, power sale; BPA to Okanogan, supplemental and entitlement capacity and summer seasonal product; BPA to other entities, power sales; BPA to small and nongenerating public agencies, summer seasonal product and power sales; BPA to PP&L, capacity sale, supplemental and entitlement capacity, Southern Idaho exchange, and Centralia standby; BPA to PGE, capacity sale, supplemental and entitlement capacity, and power sale; BPA to PSE, Baker Head loss, power sale, supplemental and entitlement capacity and WNP-3 settlement; BPA to Ravalli Electric Cooperative, power sale; BPA to Richland, Ormet power sale; BPA to Salem Electric Cooperative, green power sale; BPA to SCL, supplemental and entitlement capacity sale; BPA to Snohomish County PUD, power sale; BPA to Springfield Utility Board, power sale; BPA to Surprise Valley, summer seasonal product; BPA to TPU, supplemental and entitlement capacity and power sale; BPA to Tillamook,

- power sale; BPA to United Electric Cooperative, power sale; BPA to Umatilla Electric Cooperative, summer seasonal product; BPA to Vigilante Electric Cooperative, summer seasonal product; BPA to Wasco Electric Cooperative, summer seasonal product; and BPA to Western Oregon Cooperative, power sale.
4. Columbia Storage Power Exchange (CSPE) is the sale of the Canadian share of downstream benefits under the Columbia River Treaty with Canada to a group of Northwest utilities, expiring April 1, 2003.
  5. BPA's generating public agencies' purchases are requirements that these agencies place on BPA under their power sales contracts and BPA's partnership program. BPA's obligation is each agency's net firm load requirement not served by its own dedicated resources. These contracts expire between June 30, 2001, and September 30, 2001; however, they are assumed to remain at the OY 2001 level through the study period.
  6. No investor-owned utility customers are purchasing power under the 1981 power sales contract.
  7. Federal diversity is a percentage reduction applied to the Federal system non-coincidental peak utility requirements. This is due to the fact that all peaking electrical loads do not occur simultaneously throughout the region.
  8. Sustained peaking adjustment is a percentage reduction applied to the Federal hydrosystem to meet a capacity load of 50 hours per week. This adjustment also includes reductions for Federal hydro maintenance, spinning reserves, forced outage reserves, and summer flow augmentation on the Snake River and John Day hydro projects.
  9. Canadian Entitlement Return non-Federal to the Columbia River Storage Exchange (CSPE) reflects the public agencies' and IOUs' obligation of Canadian Entitlement allocation to the Northwest entities of the CSPE, which expires March 31, 2003.
  10. Canadian Entitlement Return non-Federal to Canada reflects the Federal system, public agencies' and IOUs' obligation of Canadian Entitlement allocation to Canada, which began April 1, 1998.
  11. Restoration adjustments for the losses and gains of the hydro system due to Canadian storage under the terms of the Pacific Northwest Coordination Agreement. It is an obligation to those utilities that gained generation from the addition of Canadian storage, and a resource gain to utilities that lost generation from Canadian storage.
  12. Federal renewable resources include: James River Wauna.
  13. BPA's imports include: Anaheim to BPA, exchange energy and peak replacement energy; Azusa to BPA, power exchange and peak replacement; Banning to BPA, power exchange and peak replacement; BGP to BPA, supplemental energy; Burbank to BPA, exchange energy; Colton to BPA, power exchange and peak replacement; Glendale to BPA, exchange energy; other entities to BPA, power exchange; Pasadena to BPA, exchange energy, peak replacement energy, and seasonal replacement energy; PP&L (Wyoming Division) to BPA for Southern Idaho, power sale; Riverside to BPA, exchange energy, peak replacement energy, diversity exchange energy, and seasonal exchange energy; Sierra to BPA for Harney and Wells; SCE to BPA, exchange energy, supplemental energy, environmental storage, option energy, peak replacement and power sale; and PowerEx to BPA for ABC and Palo Alto, peak replacement energy.
  14. Federal contracts in include: AVC to BPA, supplemental entitlement peak replacement and WNP-3 settlement; Chelan County PUD to BPA, supplemental entitlement peak replacement; Colockum to BPA, supplemental entitlement peak replacement; Cowlitz County PUD to BPA, supplemental entitlement peak replacement; Douglas County PUD to BPA, supplemental entitlement peak replacement; Eugene Water and Electric Board to BPA, supplemental entitlement peak replacement; Grant County PUD to BPA, supplemental entitlement peak replacement; city of Forest Grove to BPA, supplemental entitlement peak replacement; Kittitas County PUD to BPA, supplemental entitlement peak replacement; city of McMinnville to BPA, supplemental entitlement peak replacement; MPC to BPA, exchange energy and peak replacement; Okanogan County PUD to BPA, supplemental entitlement peak replacement; other entities to BPA, supplemental entitlement peak replacement and power sale; PP&L to BPA, peak replacement and supplemental entitlement peak replacement; PGE to BPA, peak replacement and supplemental entitlement peak replacement; PSE to BPA, supplemental

- entitlement peak replacement and WNP-3 settlement; SCL to BPA, supplemental entitlement peak replacement; and TPU to BPA, supplemental entitlement peak replacement.
- 15. Federal large thermal includes the generation from WNP-2, operated by WPPSS.
  - 16. Non-utility generation (NUG) resources include generation provided to BPA by independent power producers and resources included under the Public Utility Regulatory Policies Act (PURPA).
  - 17. Resource acquisitions are resources BPA has identified and contracted for future purchase. When new Federal resource acquisitions are contracted for and/or on-line, they will be included in the loads and resources balance.
  - 18. Hydro, small thermal and miscellaneous resources, and combustion turbine reserve requirements are estimated at 5 percent of the Federal capacity of these resources.
  - 19. Large thermal reserve requirements are estimated at 15 percent of the WNP-2 nuclear project.
  - 20. Federal spinning reserve is the reserve generating capacity maintained to provide a regulating margin for the automatic generation and frequency control of power generation.
  - 21. Hydro maintenance is the sum of all Federal hydro project maintenance based on the mean of the 1983-84 through 1988-89 schedules submitted to the Northwest Power Pool.

---

## REGIONAL FOOTNOTES

---

### For Exhibits 19 through 26

1. Firm loads for the region include the sum of the estimated firm loads of Federal agencies, public agencies, direct service industries (DSIs), investor-owned utilities (IOUs), and associated transmission losses. Peak loads represent non-coincidental capacity demands adjusted to account for Federal system diversity; they are based on the prediction of normal weather and have a 50-percent chance of being exceeded.
2. Total loads for the region include system firm loads plus Utah Power Company's interruptible load.
3. Regional exports include: BPA to Anaheim, capacity/energy exchange and capacity sale; BPA to Azusa, power exchange and capacity sale; BPA to Banning, power exchange and capacity sale; BPA to BART, power sale; BPA to Burbank, power sale and capacity/energy exchange; BPA to Colton, power exchange and capacity sale; BPA to Farmington, power sale; BPA to Federal agencies, power sale; BPA to Glendale, power sale and capacity/energy exchange; BPA to M-S-R, power sale; BPA to other entities, power sales; BPA to Palo Alto, capacity sale and seasonal energy; BPA to Pasadena, power sale, capacity/energy exchange and seasonal energy exchange; BPA to Riverside, capacity/energy exchange, capacity sale and diversity exchange; BPA to SCE, power sale, capacity/energy exchange, environmental storage, and option capacity; BPA to SCE Source, power sale; BPA to BC Hydro for Canadian Entitlement; and BPA's Northwest-Southwest Intertie losses; AVC to Modesto, power sale; AVC to West Kootenai, capacity sale; city of Idaho Falls to UPC for Gem State, IPC to Sierra Pacific, power sale and for Harney and Wells; IPC to UAMPS, power sale; IPC to the city of Washington, Utah, power sale; IPC to Truckee/Donner, power sale; PP&L to CDWR, power sale; PP&L to PP&L (Northern California), transfer to PP&L's Northern California load; PP&L to Redding, power sale; PP&L to SMUD, power sale; PP&L to SCE, power sale; PP&L to WAPA, power sale; PGE to Glendale, power sale and seasonal power exchange; PSE to PG&E, seasonal power exchange; SCL to NCPA, seasonal power exchange; Snohomish County PUD to SMUD, power sale; and TPU to WAPA, power sale.

Also included in exports are resources purchased by utilities outside the region. These include Longview Fibre to WAPA; 14.8 percent of the Boardman coal plant sold to San Diego Gas and Electric; and 10.2 percent of the Boardman coal plant sold to the city of Turlock, CA.

This analysis assumes that BPA's power sales and capacity/energy exchange agreements with the cities of Burbank, Glendale, Pasadena, Modesto, Santa Clara and Redding, and with SCE are in power sales mode throughout the study period.

4. Federal diversity is a percentage reduction applied to the Federal system non-coincidental peak utility allocation requirements. This is because all peaking electrical loads do not occur simultaneously throughout the region.
5. Regulated hydro includes those hydro dams where the firm energy generation of the dam is affected by the release of stored water from upstream reservoirs. Regulated hydro generation is determined by completing a hydro regulation study of the Pacific Northwest hydro system.
6. Independent hydro includes those hydro dams where no reservoirs exist upstream to release stored water and the firm energy is based on fixed historical flows. Hydro independents are not changed as a part of the hydro regulation study.

7. Sustained peaking adjustment is a percentage reduction applied to the Federal hydro system to meet a capacity load of 50 hours per week. This adjustment also includes reductions for Federal hydro maintenance, spinning reserves, forced outage reserves, and summer flow augmentation on the Lower Snake River and John Day hydro projects.
8. Small thermal and miscellaneous resources include: IPC: Energy Management Systems; MPC: regional Bird and Corette; PGE: Summit 1 and 2; PSE: Crystal Mountain and Shuffleton; SCL: Boundary; and TPU: Steam Plant 2.
9. Combustion turbines include: Clark: River Road (Cogentrix); IPC: Wood River; PGE: Bethel and Beaver; PSE: Whidbey Island, Whitehorn, Fredrickson, and Fredonia units 1 and 2; and WWP: Northeast units 1 and 2.
10. Renewables include: BPA: James River Wauna; Consumers: Coffin Butte; Emerald County PUD: Short Mountain; and WWP: Kettle Falls.
11. Cogeneration includes: EWEB: Weyerhaeuser's WEYCO Energy Center; Snohomish: County PUD Scott Paper; PGE: Coyote Springs; and PP&L: Hermiston. Longview Fibre output is sold outside the region to WAPA.
12. Regional imports include: Anaheim to BPA, exchange energy and peak replacement energy; Azusa to BPA, power exchange and peak replacement; Banning to BPA, power exchange and peak replacement; Basin Electric to BPA, power sale; BGP to BPA, supplemental energy; Burbank to BPA, exchange energy; Colton to BPA, power exchange and peak replacement; Glendale to BPA, exchange energy; other entities to BPA, power exchange; Pasadena to BPA, exchange energy, peak replacement energy, and seasonal replacement energy; PP&L (Wyoming Division) to BPA for Southern Idaho, power sale; Riverside to BPA, exchange energy, peak replacement energy, and seasonal exchange energy; Sierra Pacific to BPA for Harney and Wells; SCE to BPA, exchange energy, supplemental energy, environmental storage, option energy, and peak replacement; and PowerEx to BPA for ABC and Palo Alto, peak replacement energy; BC Hydro to PSE, power sale; BC Hydro to SCL, for Ross; Glendale to PGE, seasonal power exchange; NCPA to SCL, seasonal power exchange; PG&E to PSE, seasonal power exchange; PowerEx to Benton REA, power sale; PowerEx to Clearwater Power Company, power sale; PowerEx to EWEB, power sale; SCE to PP&L, power sale; and West Kootenai to AVC, peak replacement energy.

In addition, imports include the following intra-company transfers: PP&L (Wyoming) to PP&L, and Utah Power Company.

This analysis assumes that BPA's power sales and capacity/energy exchange agreements with the cities of Burbank, Glendale, Pasadena, Modesto, Santa Clara and Redding and with SCE are in power sale mode, so exchanges and supplemental energy with these utilities are zero through the study horizon.

13. Resource acquisitions are resources BPA has identified and contracted for future purchase. When new Federal resource acquisitions are contracted for and/or on-line, they will be included in the loads and resources balance.
14. Non-utility generation (NUG) resources include generation provided to utilities by independent power producers and resources included under the Public Utility Regulatory Policies Act (PURPA). This study included 180 Individual NUGs.
15. Hydro, small thermal and miscellaneous resources, and combustion turbine reserve requirements are estimated at 5 percent of the capacity of these resources for all utilities in the region.

16. Large thermal reserve requirements are estimated at 15 percent of the total capacity of the Pacific Power and Light thermal import into the region plus the large thermal resources owned by utilities in the region.
17. Federal spinning reserves equal the reserve generating capacity maintained to provide a regulating margin for the automatic generation and frequency control of power generation.
18. Hydro maintenance is the sum of individual Federal system, public agency, and IOU hydro project maintenance, based on the average of the 1983-84 through 1988-89 schedules submitted to the Northwest Power Pool.
19. Extreme weather adjustment is the sum of all utility load responses with Pacific Northwest cold weather and has a 5 percent chance of being exceeded in the months of November through February.

## **Section 9: Administrator's Record of Decision on the 1998 Pacific Northwest Loads and Resources Study**

---

# **Section 9: Administrator's Record of Decision on the 1998 Pacific Northwest Loads and Resources Study (The White Book)**

---

## **1. Introduction**

The 1998 Pacific Northwest Loads and Resources Study (White Book) establishes the Bonneville Power Administration's (BPA) long range planning basis for supplying electric power to BPA customers. The White Book is not an operational planning guide, nor is it used for BPA ratesetting purposes under section 7(i) of the Northwest Power Act. The White Book includes Federal system loads and resources and regional loads and resources with detailed technical appendices. This White Book updates the 1997 Pacific Northwest Loads and Resources Study, published in July 1998. The 1998 White Book is being published as a projection of regional and Federal system load and resource capabilities to be used as input to BPA's resource planning process and as a benchmark for annual determinations under BPA's requirements power sales contracts.

In 1997, BPA began a public process to implement recommendations made in the Comprehensive Review of the Northwest Energy System Final Report. One aspect of that report recommends a contracting process, termed "subscription," through which BPA would offer new power sales contracts for the post-2001 period. BPA recognized some of its customers wanted contracts with some regional and extraregional customers. This White Book accounts for those additional contracts executed this past year as part of firm power sales for the post-2001 period.

## **2. Statutory Background**

With the passage of the Northwest Power Act in December 1980, Congress directed BPA to assure the Pacific Northwest an adequate, efficient, economic and reliable power supply.

*16 U.S.C. §839(2).* In order to carry out this mandate, BPA was directed by Congress to offer new power sales contracts to its regional firm power customers and to plan and acquire firm resources sufficient to meet these firm power loads. *16 U.S.C. §839e(9).*

Sections 5(b) and 5(d) of the Northwest Power Act obligate BPA to serve, in accordance with the terms of its contracts, the net firm power load requirements of utilities in the Pacific Northwest, including public bodies, cooperatives, and investor-owned utilities (IOUs), and authorize BPA to serve up to a defined amount of the firm power requirements of its existing direct-service industrial (DSI) customers. *16 U.S.C. §839c(b) and (d).* Under section 5(b), BPA is to provide firm power from the Federal system to meet the firm regional loads of a customer in excess of the firm resources, if any, which the customer has dedicated to serve its own regional firm loads under the terms of its contract with BPA. *16 U.S.C. §839c(b)(1)(A) and (B).* BPA is also to provide electric power for those loads which were served by a customer's dedicated resources if a customer's dedicated resource is no longer available to serve loads due to obsolescence, retirement or loss of the resource, or loss of contract rights. Because the Northwest Power Act requires that the Administrator meet all of the firm regional peak and energy loads of its utility customers in excess of the customers' firm resources dedicated to serve loads, BPA must have a high degree of certainty regarding its projected firm load obligations to efficiently and reliably plan the use of its own resources and anticipate any resource additions that may be needed to meet its obligations.

Section 6(a)(2) of the Northwest Power Act obligates BPA to acquire sufficient resources on a planning basis to meet its firm load obligations, including its section 5(b) contract obligations. BPA's obligations to provide firm electric power to its utility customers for their regional firm loads and its contract obligations to provide firm power to its DSI customers comprise the largest portion of BPA's firm obligations. *16 U.S.C. §839c(b); §839c(d)*. BPA's contracts with utility and DSI customers contain provisions that implement the above statutory directives.

### 3. The White Book and the 1981 Utility Power Sales Contract

#### A. The White Book

The White Book provides projections of regional and Federal system loads and resource capabilities that BPA uses to calculate the firm load obligations it must serve over the planning period and those Federal system resources that are or will be available to meet those loads. Technically, it is a loads and resources forecast document derived from regional economic planning models. It incorporates information on forecasted loads and resource capability obtained from (1) public agency and investor-owned utility (IOU) customers through their annual data submittals to the Pacific Northwest Utilities Conference; (2) the Pacific Northwest Coordination Agreement (PNCA) Operating Committee; and (3) analysis of the Federal hydroelectric power system. Verifiable changes to individual utility service obligations, as evidenced by the annual submission to BPA of a utility's Firm Resource Exhibit (FRE) under section 12 of the power sales contract with BPA, are also included. The White Book also serves as the referenced load-resource document under certain BPA contracts with extraregional purchasers.

#### B. The 1981 Utility Power Sales Contract

In 1981, BPA and its utility, Federal agency and DSI customers entered into 20-year power sales contracts. Section 5(b)(1) of the Northwest Power Act directed BPA to sell electric power for the firm load requirements under contracts with its public utility, electric cooperative, and IOU customers. *16 U.S.C. §839c(b)(1)*. BPA also entered into requirements power sales contracts with its DSI customers under section 5(d). *16 U.S.C. §839c(d)(1)*.

Certain provisions of the utility power sales contract address BPA's load obligation planning. Sections 10(a) and (d) require BPA and its customers to exchange long-term planning and load information with each other. Customers are to provide BPA with any planned changes in their firm power loads. Section 8 of the contract requires a customer to inform BPA of any new large single loads it plans to serve. Section 5(a) of the contract restates BPA's statutory obligation to plan and acquire enough resources to meet the firm power load obligations of its customers. BPA's contractual obligation to provide electric power to serve its customers' loads is not contingent upon any specific action taken by its customers to provide resources.

Section 12 of the utility contract addresses the statutory need for BPA and the customer to identify those firm resources, if any, which the customer will dedicate to serve its firm load for a rolling 7-year period. It also identifies the conditions for adding to, removing, or modifying dedicated firm resources and the terms for notice. These provisions enable both BPA and its customer to know the resources each will use to serve the customer's firm load and their respective service obligations, thus creating certainty for load and resource planning.

Under section 12 of the contract the customer must submit an FRE, which BPA reviews and either changes or accepts. The FRE declares the utility's resources dedicated to serve its regional firm load over the stated 7-year period. The customer must update the declaration and may make

deletions or additions in the amounts of firm energy resources the customer will use to serve its firm load in the intervening 6 years and in the seventh year only to the extent such changes are consistent with the terms and notice periods required under section 12.

### **C. Amendments to the 1981 Utility Power Sales Contract and the 1996 Contracts**

In 1996, BPA offered its public agency customers a series of amendments to their 1981 power sales contracts, or as an alternative, offered to negotiate new power sales contracts. As a result of customers executing either amendatory agreements or new contracts, BPA's firm load obligations were reduced. BPA's firm load obligations under the amendatory agreements, the new contracts, and the unamended 1981 utility power sales contracts expire September 30, 2001, or July 31, 2001, respectively. BPA's power sales contract obligations to its public agency customers are determined by each customer's load and its dedicated resources. These dedicated resources are categorized as either 5(b)(1)(A) or 5(b)(1)(B) resources. Section 5(b)(1)(A) requires a customer to dedicate any firm resources it used or had planned to use in the year prior to enactment of the Act on December 5, 1980. Section 5(b)(1)(B) resources include each customer's generation and contract resources dedicated to serve that customer's load, including pre- and post-1996 diversification (5)(b)(1)(B) resources.

BPA's 1998 White Book includes the change in Federal firm loads and obligations resulting from the amendatory agreements and new contracts and also shows projections of Federal firm regional load obligations and resources for the 10-year period ending July 31, 2009. The firm load obligations projected for the study period are based in part on current firm contract obligations and the following assumptions:

- BPA's power sales contracts with Pacific Northwest Federal and public agencies and IOUs, which expire between June 30 and September 30, 2001, are assumed to continue at their FY 2001 levels through the remainder of the study period.<sup>1</sup>
- Total public agency firm resources serving firm regional load will continue to be available in OY 2000-01 and through OY 2008-09.<sup>2</sup> The actual amount of load obligation BPA will have after expiration of the above agreements will be determined by new agreements reached through the subscription process.

BPA believes these assumptions are based on the best known terms and conditions for its regional obligations at this time and it is reasonable to use them. BPA recognizes that its firm requirements obligation to its public agency customers under new contracts could range from 912 average megawatts to as much as 6,331 average megawatts in OY 2009 if no public agency diversification occurs after OY 2001. BPA may also serve firm nonrequirements obligations through sales of surplus power or excess Federal power in the region under new contracts. BPA's total regional firm power obligations may be a combination of both sales of requirements and sales of excess Federal power in the next contracts. Table R-1, page 122, shows BPA's potential public agency firm obligations using a comparative range of possible requirements service. BPA's obligation to public agencies and cooperatives based on BPA's current 1981 power sales contracts and 1996 amendments is 3,842 average megawatts for OY 2002 through 2009. Actual contract obligations under new power sales contracts for OY 2002 through 2009 may be higher.

---

<sup>1</sup> Requirements service provisions are well understood and, for purposes of this study, BPA continues to use them with the recognition that replacement contracts may modify or alter some of those provisions. It is too speculative to attempt to define in this study what may result from the renegotiation of the power sales contracts with customers. To the extent new terms or provisions for requirements service become known, a later study may make adjustments to the assumptions used here.

<sup>2</sup> This obligation is proposed to be changed in the subscription contracts, but the form of load growth obligation is not presently known. To the extent that different terms for load growth become known, they will be accounted for in a later study.

**Table R-1**

**Range of Potential Federal System Public Obligations for OY 2001-02 Through OY 2008-09 (Energy in Average Megawatts)**

| Operating Year   | 2001-02 | 2002-03 | 2003-04 | 2004-05 | 2005-06 | 2006-07 | 2007-08 | 2008-09 |
|--|---------|---------|---------|---------|---------|---------|---------|---------|
| <b>1. Federal Minimum Public Obligations<sup>3</sup> (Already Signed Post-2001 Public Contracts)</b>         | 912     | 1,034   | 1,042   | 1,049   | 986     | 354     | 253     | 255     |
| <b>2. 1998 White Book Estimated Federal Public Obligations (Public Obligation Remains at OY 2001 Levels)</b> | 3,842   | 3,842   | 3,842   | 3,842   | 3,842   | 3,842   | 3,842   | 3,842   |
| <b>3. Public Federal Maximum Obligation (Maximum Public Obligation Including Public Load Growth)</b>         | 5,428   | 5,444   | 5,555   | 5,573   | 5,486   | 6,141   | 6,286   | 6,331   |

### **Excess Federal Power**

This White Book is not a recalculation of or change in BPA's earlier published calculations of the amount of excess Federal power that may be sold by BPA. However, this White Book does provide a calculation of an amount of firm power in excess of BPA's firm obligations over a 10-year planning period that is expected to be available as surplus firm power under section 5(f) of the Northwest Power Act. This power may be sold as either excess Federal power under Public Law (P.L.)104-46, consistent with BPA's calculations of excess Federal power, or as surplus power under P.L. 88-552 and section 9(c) of P.L. 96-501 (Northwest Power Act). To the extent that BPA has annual amounts of planned firm power that are surplus to its firm contract obligations, BPA may market all or a portion of that surplus power as excess Federal power. The duration of these sales will be as stated in BPA's Excess Federal Power Policy. For purposes of this White Book, a sale of excess Federal power with delivery occurring for a year or more is considered a firm obligation on BPA and is included as a firm obligation in Federal loads.

### **CONCLUSIONS:**

For the foregoing reasons the methodology and the assumptions in the 1998 White Book are approved.

Issued in Portland, Oregon on August 18, 1999.

<sup>3</sup> Federal minimum public obligations include sales to regional public agencies and cooperatives and extraregional sales to public agencies in eastern Montana.

## **Section 10: Glossary and Acronyms**

---

# Glossary

---

**Average Megawatts** – A unit of electrical consumption or production over a year. It is equivalent to the energy produced by the continuous use of 1 megawatt of capacity served over a period of 1 year. (One average megawatt is equivalent to 8.76 gigawatt hours, 8,760 megawatt hours, or 8,760,000 kilowatt hours.)

**Bonneville Power Administration (BPA)** – BPA is a power marketing agency, responsible for acquiring and delivering sufficient power to meet its contractual obligations to serve the electrical needs of its customers. BPA does not own generating resources.

**Capacity** – The maximum power that an electrical system or machine such as a hydro powered or thermal powered generating plant can produce under specified conditions.

**Capacity Factor** – The ratio of the average load on a machine or piece of equipment over a given period to maximum power rating of the machine or equipment.

**Cogeneration** – The simultaneous production of electricity and useful heat energy from a fuel source. Often this is accomplished by the recovery of waste energy caused by various industrial and commercial operations. This is typically used for industrial processes or space heating applications.

**Conservation** – Any reduction in electrical power as a result of increases in the efficiency of energy use, production, or distribution.

**Critical Period** – That portion of the historical streamflow record during which the recorded streamflows, combined with all available reservoir storage, produced the least amount of energy.

**Dedicated Resources** – Generating resources owned by a utility and used to serve its firm loads. These resources are declared for a rolling 7-year period in Exhibit I of the utilities' power sales contracts with BPA.

**Direct Service Industries (DSI)** – A group of industrial customers that purchase electric power directly from BPA. Most DSIs are aluminum and other primary metal smelting plants.

**Energy Load** – The demand for power averaged over a specified period of time.

**Federal Columbia River Power System (FCRPS)** – The FCRPS consists of 30 Federal hydroelectric projects constructed and operated by the U.S. Army Corps of Engineers (COE), U.S. Bureau of Reclamation (USBR), plus BPA's transmission facilities.

**Federal System** – The Federal system is a combination of BPA's customer loads and contractual obligations, and resources from which BPA acquires the power it sells. The resources include plants operated by the U.S. Army Corps of Engineers (COE), U.S. Bureau of Reclamation (USBR, and hydroelectric projects owned by the city of Idaho Falls and the Washington Public Power Supply System (WPPSS). BPA markets the thermal generation from WNP-2, operated by WPPSS.

**50-Hour Peak Capacity** – The amount of capacity that can be sustained for 10 hours a day during peak-load hours for a 5-day week.

**Firm Capacity** – Maximum on-peak electrical energy which is considered assurable to the customer to meet all contractual peak load requirements over a defined period.

**Firm Energy** – Electric power which is considered assurable to the customer to meet all contractual energy load requirements over a defined period.

**Fiscal Year** – In this study, fiscal year (FY) is the 12-month period October 1 to September 30. For example, FY 2000 is October 1, 1999, through September 30, 2000.

**Forced Outage Reserve** – Capacity that is held in reserve, for use in case a generating unit malfunctions.

**Forced Energy Sale (Spill)** – Electrical energy that cannot be accepted into the system and must either be sold or spilled due to constraints and limitations of hydro projects.

**Forebay** – The portion of the reservoir at a hydroelectric plant that is immediately upstream of the generating station.

**Historical Streamflow Record** – The unregulated streamflow database of the 50 years from August 1928 to July 1978.

**Hydroregulation** – A study simulating operation of the Pacific Northwest electric power system that incorporates the historical streamflow record, monthly loads, thermal and other non-hydro resources, hydroelectric plant data for each project, and the constraints limiting each project's operation.

**Interruptible Loads** – Loads that can be interrupted in the event of a power deficiency on the supplying system.

**Load Diversity** – An adjustment applied to peak loads to reflect the fact that all peaking electrical demands do not occur simultaneously across the region.

**Megawatt (MW)**– A unit of electrical power equal to 1 million watts or 1,000 kilowatts.

**Model Conservation Standards (MCS)** – A set of energy-efficient building standards for new electrically heated commercial and residential buildings. It also includes standards for residential and commercial building that have been changed to electric space heating.

**Nonfirm Energy** – Electrical power produced by the hydro system that is available with water conditions better than those of the critical period without appreciably jeopardizing reservoir refill. It is available in varying amounts depending upon season and weather conditions.

**Nonfirm Energy Loads** – Loads that are served with nonfirm energy whenever it is available le.

**Obligation** – Capacity and energy the Federal system is required to provide to public agencies and IOUs under their power sales contracts with BPA.

**Operating Year** – For this study, operating year (OY) is the 12-month period August 1 through July 31. For example, OY 1999-2000 is August 1, 1999, through July 31, 2000.

**Peak Load** – The maximum demand for power during a specified period of time.

**PURPA Resources** – Resources declared by utilities according to the Public Utility Regulatory Policies Act of 1978 (Public Law 95-617).

**Region** – The geographic area defined by the Pacific Northwest Electric power Planning and Conservation Act. It includes Oregon, Washington, Idaho, Montana west of the Continental Divide, portions of Nevada, Utah, and Wyoming that lie within the Columbia River drainage basin, and any rural electric cooperative customer not in the geographic area described above but served by BPA on the effective date of the Northwest Power Planning Act.

**Resource Acquisitions** –Conservation or generating resources acquired in order to meet projected firm energy deficits.

**Spinning Reserves** – Reserve generating capacity which is maintained for immediate response to load variations. This provides a regulating margin for controlling the automatic generation and frequency of power in the Federal system.

**Surplus Firm Capacity** – The maximum amount of assured electrical energy above the firm energy loads served by the power system.

**Sustained Peak** – The peaking capacity necessary to sustain a load for a given period of time.
