

# ENERGY PROJECT MANAGER

Energy Smart  
Industrial

Co-funded support to maximize energy savings at your site

By assigning or hiring an Energy Project Manager (EPM), your company can earn up to \$150,000 of additional funding separate from the standard incentives offered by your local utility. This co-funding helps offset the time and effort required to identify and implement your energy conservation projects.

**An EPM can improve project outcomes, timeline, and return on investment.**

**Save** more energy and money by maximizing energy savings

**Reduce** project implementation lead times

**Develop** a pipeline of future energy conservation project opportunities

**Earn** an EPM payment in addition to energy savings incentives for completed energy conservation projects.

## EPM In Action

“ Clark Public Utilities’ customers have taken advantage of the Energy Project Manager offering for over ten years. Increased energy efficiency awareness, programmatic assistance, and salary support have all helped bring down manufacturing costs and generate energy savings towards utility goals. ”

Ready to get started? Contact us today to discuss EPM funding.

# Energy Project Manager Payments

- EPM payments are in addition to other utility incentives.
- Payments are up to \$0.025 per kWh of verified savings\*.
- EPM payments are processed after project completion and savings verification.
- Your utility determines the schedule for issuing EPM payments.

\*EPM payments may be up to \$150,000 or your utility's specified cap.

## Incentive Offer and EPM Payment

**Figure 1.** Actual incentive offers vary by savings and incentive rates. This example represents the cumulative incentives offered for 7.6 million kWh of verified energy savings plus EPM payments for six projects completed within a two-year rate period.

## We're here to help.

Complete the application process with your Energy Smart Industrial Partner (ESIP) and utility:

- ✓ Assign an EPM (employee or contractor)
- ✓ Develop a list of energy projects with a combined savings goal of at least 200,000 kWh

Your ESIP and utility will help you enroll.

Contact your ESIP or email:
