MEMORANDUM

FROM:

TO:

DATE: Tuesday, March 06, 2018

RE: Legal Analysis on Federal Resource Participation ADF

(b)(5)

From: Greene, Richard A (BPA) - LP-7

Sent: Fri Sep 28 16:32:27 2018

To: Symonds, Mark C (BPA) - BD-3; Kerns, Steven R (BPA) - B-3; Mantifel, Russell (BPA) - B-3

Cc: Pettinger, Rebekah S (BPA) - LP-7

Subject: Question on System Sales and Scheduling

Importance: Normal

(b)(5)

From: Truong,Mai N (BPA) - PGST-5
Sent: Wed Mar 07 10:37:35 2018
To: Messemer,Clarisse M (BPA) - PGST-5; Chang,Elsa (BPA) - PGST-5; Polsky,Cynthia H (BPA) - PGST-5; Siewert,Christopher W (BPA) - PGSD-5; Van Calcar, Pamela M (BPA) - PGSP-5; Kerns,Steven R (BPA) - PGS-5; King,Eric V (BPA) - TSPP-TPP-2; Mantifel,Russell (BPA) - TS-DITT-2; Puyleart, Frank R (BPA) - TOOC-DITT-2; Sanford,Chris T (BPA) - TOR-DITT-1; Gaube,Stephen J (BPA) - PTF-5; Haraguchi,Kelii H (BPA) - PTM-5; Federovitch,Eric C (BPA) - PTM-5; Davis,Thomas E (BPA) - LT-7; Simpson,Troy D (BPA) - TOI-DITT-2; Kochheiser,Todd W (BPA) - TOI-DITT-2; Dernovsek,David K (BPA) - PTKP-5; Greene,Richard A (BPA) - LP-7; Pettinger,Rebekah S (BPA) - LP-7; Symonds,Mark C (BPA) - BD-3; Will,Garland L (BPA) - PGST-5; Schaffroth,John T (CONTR) - PGL-5; Pedersen Mainzer,Margaret E (BPA) - PTL-5; Kitchen,Larry (BPA) - PTL-5; Stermer,Anna M (BPA) - PGSP-5; Eaton,Sara L (BPA) - PTM-5
Subject: RE: ADF on the number of generation points bid into the EIM
Importance: Normal
Attachments: FCRPS_Config_EIM.PPTX

Updated NGR illustration attached.

There's a week and a half left to complete a rough draft.....

3/7 Agenda:

1. Quick review of the curtailment risk analysis - Todd
 - a. Is there a need for a 4th alternative based on this analysis - All
2. NGR functionality illustration – Elsa
3. Identify outstanding item /assign action items – All

Subject: ADF on the number of generation points bid into the EIM

When: Monday, March 05, 2018 2:00 PM-3:00 PM (UTC-08:00) Pacific Time (US & Canada).

Where: HQ 418 x4000 ID: (b)(2)

Sensitivity: Private

Rescheduling the 3/2 instance only. Moving to 3/5

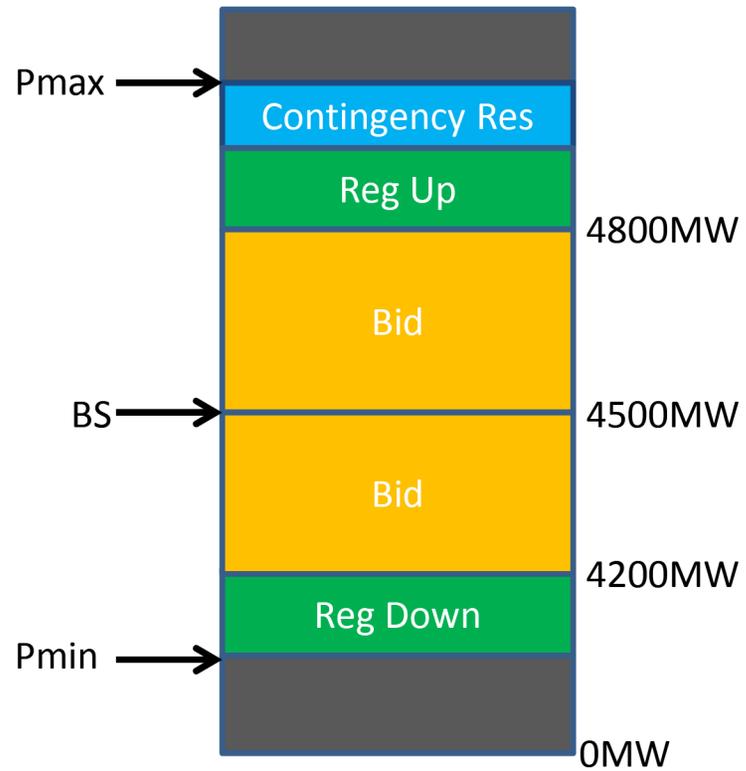

Traditional Setup:

APR
GCL + CHJ

GDF*:
GCL 0.67
CHJ 0.33

*GDF is calculated based on BP set by hydro scheduler. GDF here controls the distribution of MW for both BS and bid range.

	BP (MW)	GDF
GCL	3000	3000/4500 = 0.67
CHJ	1500	1500/4500 = 0.33
SUM	4500	1

Powerex's Setup:

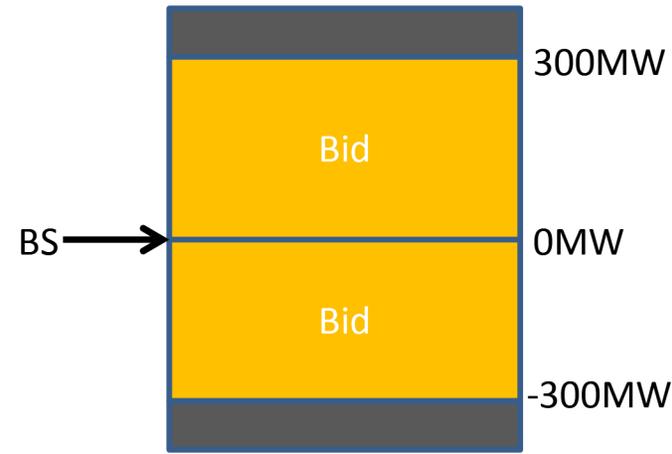

ANPR
GCL + CHJ

GDF**:
GCL 0.67
CHJ 0.33

APR (NGR)
GCL + CHJ

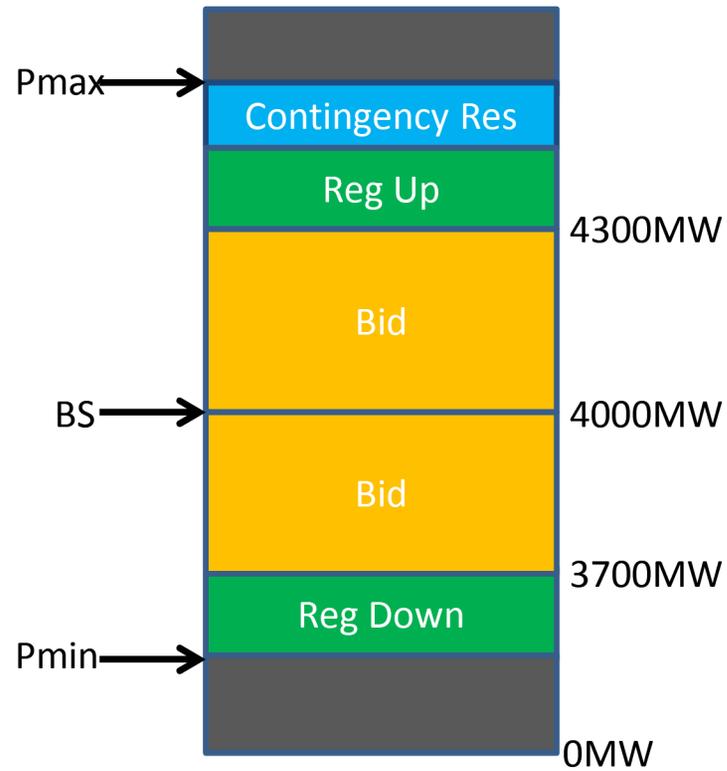

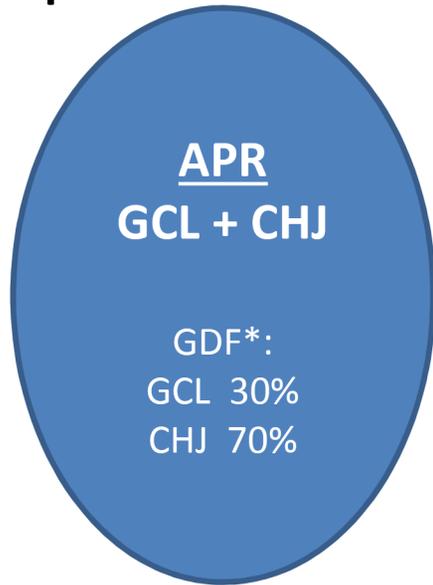

GDF***:
GCL 0.3
CHJ 0.7

**Controls the distribution of MW for BS (input to CAISO's EIM network model)

***Controls the distribution of MW for bid range

Traditional Setup:

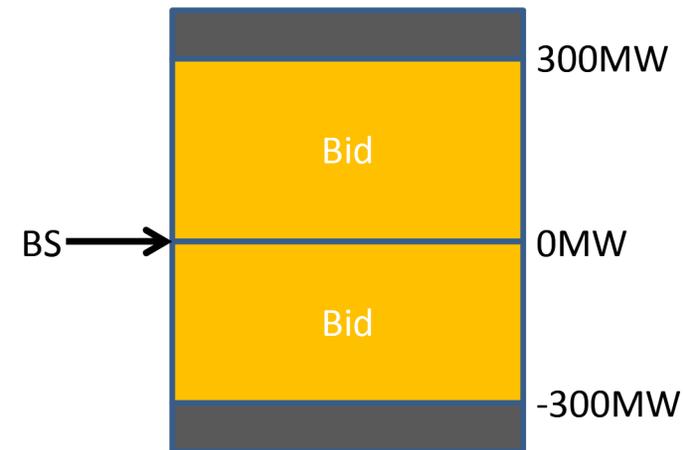

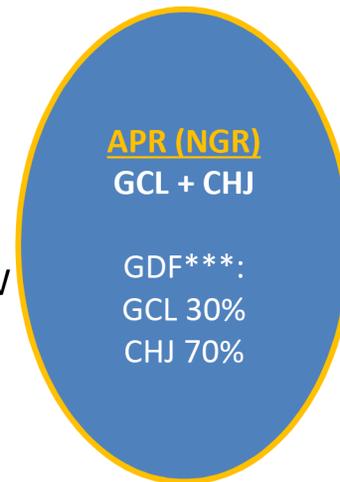

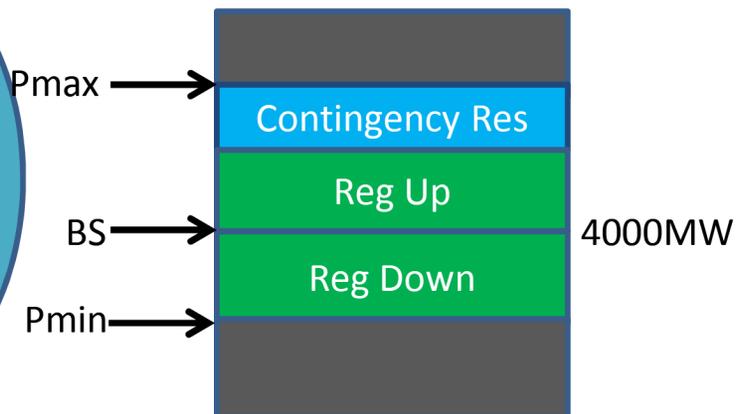

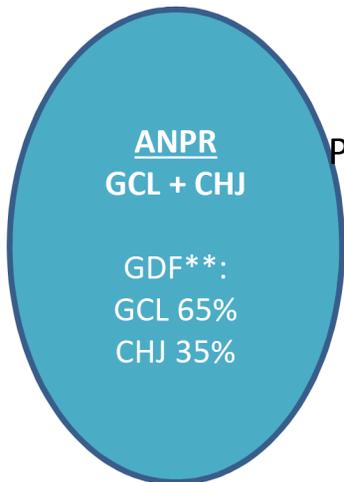

*Controls base schedule and bid range

Powerex's Setup:

**Controls BS

***Controls bid range

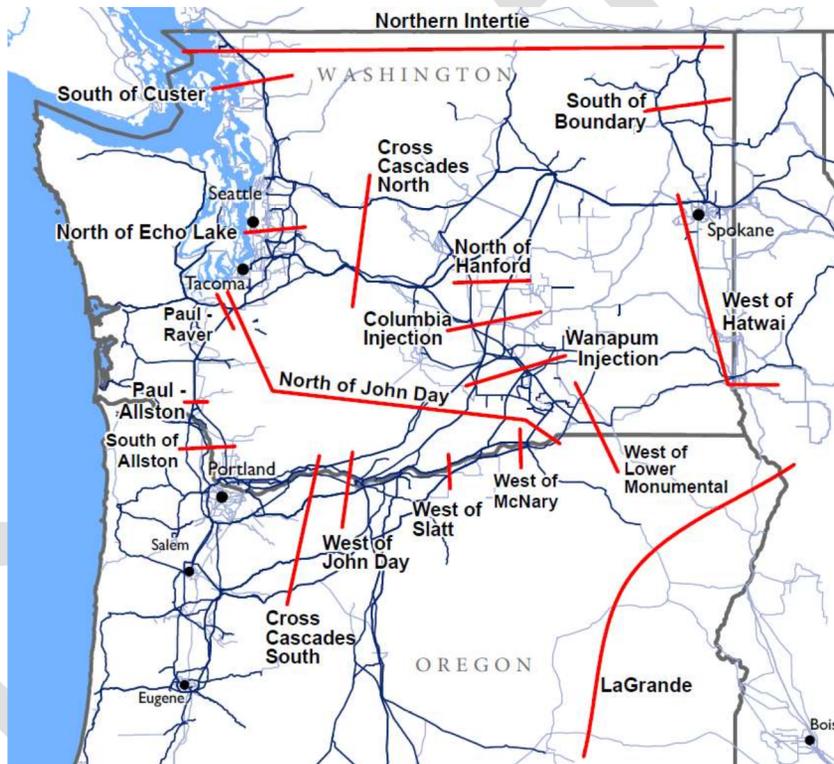

Objective & Approach:

Provide a high-level assessment of the risk of congestion on BPA internal flowgates

Methodology:

- Analyzed historical in-hour curtailments events between 2008 and present.
- Analyzed excursion minutes (flows > TTC) for CY2015 – FY2018 (YTD)
- Note: SOL Methodology changed 4/2017 where curtailments no longer occur when actual flows exceed the TTC
 - RTCA used as a real-time tool
 - Still curtail when MaxTTC is reached
- Results have not been peer reviewed – draft results!

Flowgates:

Summary:

- The number and duration of actual flows exceeding TTC has been increasing
- The number curtailments has been decreasing
- Trends are likely due to new SOL methodology that went into effect on 4/1/2017
- Overall risk of curtailments is fairly low on most flowgates
- These trends may or may not continue – hard to predict the future!

Curtailment Trends:

CURTAILMENT EVENTS - ALL PRIORITIES (1,2,6,7)

Please read the FCRPS participation in an EIM paper prior to tomorrow's meeting at 3pm.

Agenda: (Discussion does not need to be in this specific order)

1. Review the 3 alternatives – 1, 3 or 10
2. Expand on the pros/cons for each alternative
3. Identify assumptions
4. Identify what we don't know

Thanks!

Subject: ADF on the number of generation points bid into the EIM

We are cancelling the series of meetings on the FCRPS participation model ADF. There were no further questions from the Tier IIs. The ADF should go to Joel and Richard by the end of the week for a decision. We will reschedule the meeting if any further information is requested and we will certainly let everyone know of the decision when we hear it.

Aggregate because water transit time is <135 minutes?

Inconsistent with “electrically similar”?

15-Minute Market Timeline

5-Minute Market Timeline

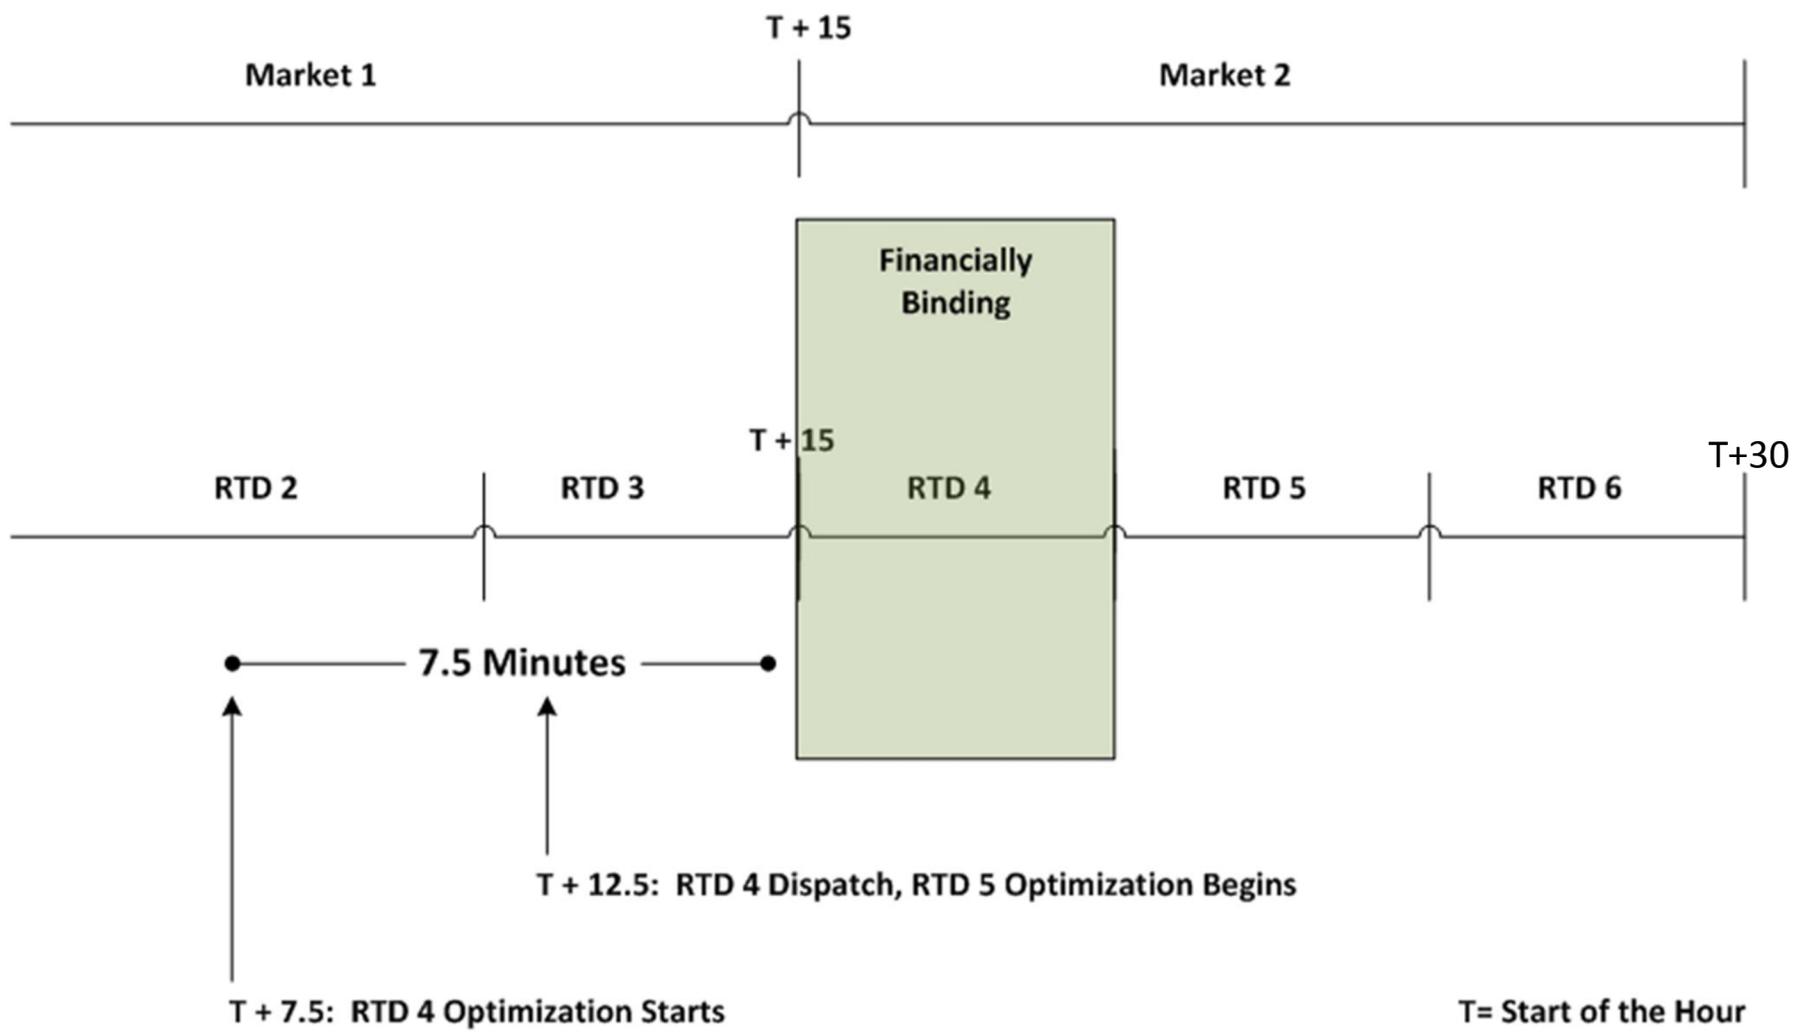

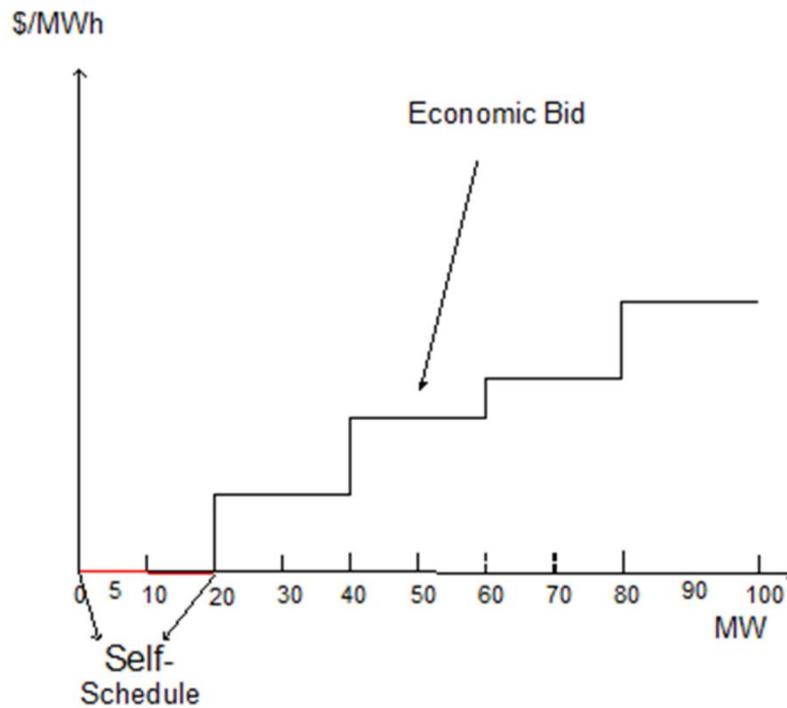

Exhibit 5-1: Example of Energy Bid with Self-Schedule & Economic Bid Components

CAISO BPM, Market Instruments, Section 5, page 52

The Energy Bid Curve component contains:

An Energy Bid Curve of up to 10 segments (defined by 11 pairs) of Energy offer price (\$/MWh) and operating level (MW) for each of the 10 segments. The Energy Bid Curve begins at the Minimum Load level or the sum of its Self-Schedules, whichever is greater, of the Generating Unit.

Resources which have had their market-based rate authority suspended per CAISO Tariff Appendix II and wish to submit an Energy Bid Curve may only submit at a price of \$0/MWh, or the Scheduling Coordinator may submit a Self-Schedule.

Example of Energy Bid Curve Component for a Generating Unit with a P_{Min} of 70MW and a P_{Max} of 500 MW

Segment	Operating Level (MW)	Energy Price \$/MWh
1	70	25
2	150	30
3	200	35
4	250	40
5	300	45
6	340	50
7	375	55
8	400	60
9	450	65
10	475	75

Non-Generator Resources— NGRs are resources that have a continuous operating range from a negative to a positive power injection. NGRs are generally treated like Generating Units, but some bidding limitations apply due to their unique operating characteristics. See section 4.1.1 for more details.

Bidding limitations for NGRs

NGRs are resources that operate as either Generation or Load and that can be dispatched to any operating level within their entire capacity range but are also constrained by a MWh limit to (1) generate Energy, (2) curtail the consumption of Energy in the case of demand response, or (3) consume Energy.

More generally, NGRs are resources that have a continuous operating range from a negative to a positive power injection; i.e., these resources can operate continuously by either consuming energy or providing energy, and can seamlessly switch between generating and consuming electrical energy. An NGR functions like a generation

resource and can provide energy and AS services. **Because of the continuous operating range, NGRs do not have minimum load operating points, state configurations, forbidden operating regions, or offline status (unless on outage). Therefore, they do not have startup, shutdown, minimum load, or transition costs.**

The regulation energy management (REM) option allows non-generator resources that require an offset of energy in the real time market to provide regulation. NGRs that select this option can only participate in the ISO's regulation markets.

The following table describes the special bidding limitations for NGR's.

Subject: RE: Strategy Negotiations for EIM

I noticed this morning that a document I emailed you a few days ago that included excerpts of OGC's legal analysis from last October regarding power issues had the "OUO" designation on it. That designation has been removed. Therefore, I ask that you delete that file and all paper copies and use the attached document of excerpts which does not include the OUO designation.

Thank you!

Tom

Subject: ANPR, APR, and NGR

Importance: Normal

I found two presentations about Powerex's EIM participation. How Powerex set up NAPR, APR, and NGR are explained.

<https://www.caiso.com/Documents/PowerexPresentation-PowerexEIMImplementationAgreementOverview.pdf>

https://www.caiso.com/Documents/Agenda_Presentation_PowerexEnergyImbalanceMarketImplementation.pdf

- NGR's are a subset of APR's that have non-zero GDF's.
- A same plant can be both ANPR and APR.
- ANPR's (meet load and cover BR & CR): a base schedule and base GDF's are submitted.
- APR's (provide energy to market in EIM): a base schedule of zero, Pmin & Pmax, GDF's for NGR's, and a bid curve are submitted.

Sent: Mon Jan 27 09:41:07 2020
To: Messemer, Clarisse M (BPA) - PGST-5
Subject: APR/ANPR
Importance: Normal
Attachments: Musings on FCPRS Aggregations in the EIM.docx

FYI – please don't circulate very broadly since it is still draft

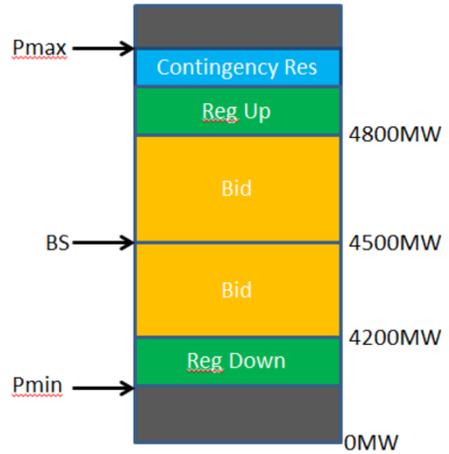

Steve Kerns
Director, Grid Modernization
Bonneville Power Administration

Traditional Setup:

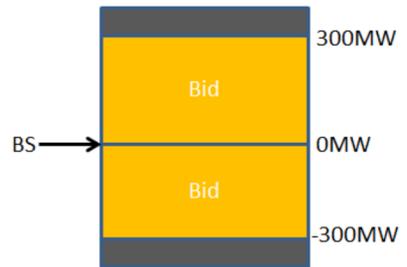

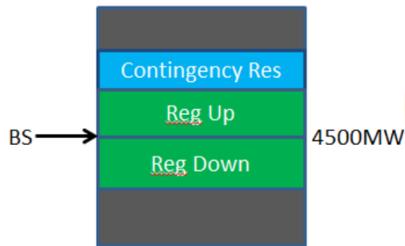

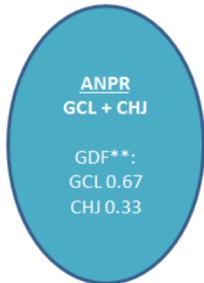

*GDF is calculated based on BP set by hydro scheduler. GDF here controls the distribution of MW for both BS and bid range.

	BP (MW)	GDF
GCL	3000	$3000/4500 = 0.67$
CHJ	1500	$1500/4500 = 0.33$
SUM	4500	1

Powerex's Setup:

**Controls the distribution of MW for BS (input to CAISO's EIM network model)

***Controls the distribution of MW for bid range

Subject: Simple spreadsheet on balancing authority area response factors and how they would be reported as GDFs to CAISO for ANPR
Date: Monday, January 27, 2020 4:13:37 PM
Attachments: Book1.xlsx

Here is a very simple spreadsheet showing the ANPR GDF values while still running the FCRPS as a single system for INC/DEC/CR allocation. Two different scenarios, first is if we persuade CAISO to have separate GDF values for INC, DEC and CR, other if they want just one. For the last one, assumed we would use the summation of the response factors for INC and CR.

Bart

Zone	Plant	BA Responses			EIM GDFs			EIM GDFs if only one set allowed per zone
		INC	DEC	CR	INC	DEC	CR	If Only one GDF for inc/dec/cr, assume we would use INC
Upper Columbia	GCL	50%	40%	50%	67%	57%	71%	69%
	CHJ	25%	30%	20%	33%	43%	29%	31%
Upper Snake	LMN	1%	1%	1%	20%	20%	20%	20%
	LGS	2%	2%	2%	40%	40%	40%	40%
	LWG	2%	2%	2%	40%	40%	40%	40%
	IHR	0%	0%	0%	0%	0%	0%	0%
Lower Columbia	MCN	0%	0%	0%	0%	0%	0%	0%
	JDA	10%	10%	15%	50%	40%	60%	56%
	TDA	10%	15%	10%	50%	60%	40%	44%
	BON	0%	0%	0%	0%	0%	0%	0%

(\$149) what do you want the interchange metered actuals to be? They are needed to calc the load "metered actuals", but we can hide them if you want to show they aren't needed for

(\$1,250)

This should be a calculation (sum Net Gen - sum Net Interchange - Losses), but that calc isn't working out for me here...what am I missing? See interval 1.

the LAP should be the weighted hourly average of the LMPs at the Prodes above (was \$48). See formula (not sure if it's entirely correct).

**what's throwing things off are the LMPs of the PRs and the NPR 1

Total Load	Total BA Gen	Total PR (Net Load)	Net Net
1018	1018	0	0

What results from communicating the manual dispatch to the market operator is that load is now only charged for the amount of imbalance energy compared to not communicating it because the PR was not dispatched to try to meet the 25 MW INC in load in addition to the NPR INCing to meet the load. The "net net" amount is \$12 higher due to not having the difference between the \$458 payment to PR1 that is no longer occurring at the \$25 LMP rate compared to the NPR \$21 LMP rate and the additional \$458 charge (double charge for the INC) to load that is no longer occurring. This "net net" amount would likely show up in the difference other charge codes to the EESC.

Is the reason you would do the manual dispatch in this case to the NPR is because the LMP is more economical than the LMP at the PR to meet the additional demand

\$380 what do you want the interchange metered actuals to be? They are needed to calc the load "metered actuals", but we can hide them if you want to show they aren't needed

This should be a calculation (sum Net Gen - sum Net Interchange - Losses), but that calc isn't working out for me here...what am I missing? See interval 1.

The LAP should be the weighted hourly average of the LMPs at the Prodes above (was \$48). See formula (not sure if it's entirely correct).

\$456	(\$458)	(\$458)	(\$2)

** what's throwing things off are the LMPs of the FMMs and the NPR 2

From 2a (2b) scenario

Total Load	Total BA Gen	Net Leaving	Net Net
\$893	(\$385)	(\$385)	\$50

What results from communicating the manual dispatch to the market operator is that load is now only charged half the amount of imbalance energy compared to not communicating it because the PR was not dispatched to try to meet the 25 MW INC in load in addition to the NPR INCing to meet the load.

The "Net net" amount is \$12 higher due to not having the difference between the \$458 payment to PR1 that is no longer occurring at the \$25 LMP rate (compared to the NPR \$21 LMP rate) and the additional \$447 charge (double charge for the INC) to load that is no longer occurring. This "Net Net" amount would likely show up in the different offset charge codes to the EESC.

∝ the reason you would do the manual dispatch in this case to the NPR is because the LMP is more economical than the LMP at the PR to meet the additional demand

you want to show they aren't needed for the IIE settlement on interchange

		=										
	RTD UIE	\$32	\$32	\$32	\$32	\$32	\$32	\$32	\$32	\$32	\$32	\$32

the LAP should be the weighted hourly average of the LMPs at the Pnodes above (was \$48). See formula (not sure if it's entirely correct).

Total Load	Total BA Gen	Net Leaving	Net Net
\$384	(\$387)	(\$387)	(\$3)

**what's throwing things off are the LMPs of the FMMS and the NPR 2

From 2a (2b) scenario

Total Load	Total BA Gen	Total PR Ge	Net Leaving	Net Net
\$893	(\$385)	(\$458)	(\$385)	\$50

What results from communicating the manual dispatch to the market operator is that load is now only charged half the amount of imbalance energy compared to not communicating it because the PR was not dispatched to try to meet the 25 MW INC in load in addition to the NPR INCing to meet the load. The "Net net" amount is \$12 higher due to not having the difference between the \$458 payment to PR1 that is no longer occurring at the \$25 LMP rate (compared to the NPR \$21 LMP rate) and the additional \$447 charge (double charge for the INC) to load that is no longer occurring. This "Net Net" amount would likely show up in the different offset charge codes to the EESC.

& the reason you would do the manual dispatch in this case to the NPR is because the LMP is more economical than the LMP at the PR to meet the additional demand

t to show they aren't needed for the IIE settlement on interchange
